Science Experiments Review Setup:

Ethics and Experiments Scott Desposato, 2015-12-22 For most of political science's history discussions about professional ethics had nothing to do with human subjects Professional ethics involved integrity in the classroom fair tenure and promotion rule and the careful avoidance of plagiarism As most research was observational there was little need for attention to how scholarly activities might directly affect the subjects of our work Times have changed The dramatic growth in the use of experiments in social science especially overseas is generating unexpected ethical controversies The purpose of this volume is to identify debate and propose practical solutions to the most critical of these new ethical issues A leading team of internationally distinguished political science scholars presents the first examination of the practical and ethical challenges of research with human subjects in social science and policy studies Part 1 examines contextual challenges provided by experiments conducted overseas questions of culture religion security and poverty Part 2 examines questions of legal constraints on research focusing on questions of foreign review of international experiments Part 3 tackles the critical issues in field experiments including deception and consent impact on elections and careers the boundaries of the public officials exemption and the use of partner organizations to avoid Institutional Review Board (IRB) review Part 4 considers strategies for the future including training and education IRB reform institutional changes and norm development *Expanding*

Loizides, 2017-06-20 Twenty one years ago the term electronic publishing promised all manner of potential that the Web and network technologies could bring to scholarly communication scientific research and technical innovation Over the last two decades tremendous developments have indeed taken place across all of these domains One of the most important of these has been Open Science perhaps the most widely discussed topic in research communications today This book presents the proceedings of Elpub 2017 the 21st edition of the International Conference on Electronic Publishing held in Limassol Cyprus in June 2017 Continuing the tradition of bringing together academics publishers lecturers librarians developers entrepreneurs users and all other stakeholders interested in the issues surrounding electronic publishing this edition of the conference focuses on Open Science and the 27 research and practitioner papers and 1 poster included here reflect the results and ideas of researchers and practitioners with diverse backgrounds from all around the world with regard to this important subject Intended to generate discussion and debate on the potential and limitations of openness the book addresses the current challenges and opportunities in the ecosystem of Open Science and explores how to move forward in developing an inclusive system that will work for a much broader range of participants It will be of interest to all those concerned with electronic publishing and Open Science in particular Reviews of Accelerator Science and Technology Alex Chao, Weiren Chou, 2012-02-20 Trends for electron beam accelerator applications in industry Sueo Machi Ion implantation for semiconductor doping and materials modification Lawrence A Larson Justin M Williams and Michael I Current Ion beam

 Chohan Frontiers in Earth Science - Editor's Choice 2017 Valerio Acocella, 2018-03-29 2017 has been an exciting year for
 our innovative open access journal Frontiers in Earth Science many new articles have been published and are now indexed in
 Web of Science ESCI new sections have opened for submissions including Solid Earth Geophysics and our Editorial Board
 has been successfully leading the peer review process and providing comprehensive reviews to our authors Have a look at
 our archive to read about the feeding habits of dinosaurs human influence on in the African humid period volcanic hazard
 models or how glaciers flowing into the ocean surrounding Greenland have changed over time Launched at the end of 2013
 our Journal consists of several specialties whose number has increased with time and currently stands at 19 also including a
 few specialties co listed in other fields <https://www.frontiersin.org/journals/earth-science> The present selection is not
 exhaustive as new ones are being launched and or are under consideration for development This growth has been paralleled
 by a yearly increase in the number of contributions and the Editorial Board members reflecting the health of the Journal Now
 also indexed in Web of Science Emerging Sources Citation Index ESCI Frontiers in Earth Science is ambitious to become the
 leading open access journal in its field The idea of creating an Editor's Choice eBook has been in our minds for a while as we
 wanted to create an environment for the Chief Editors to highlight their choice of representative papers in the Journal we are
 happy to present now our first edition The eBook offers a quick though representative window into the different specialties
 giving additional visibility to some of the most interesting studies published in 2016 and 2017 It provides a glimpse into the
 state of the art of Earth Science on the cusp of 2020 Earth Science studies the different spheres of the Earth geosphere
 atmosphere hydrosphere and partly biosphere and as such it provides a holistic perspective of our planet This discipline in
 addition to understanding our environment enables us to face major natural challenges such as improving the management
 of natural resources promoting environmental sustainability and forecasting and managing natural hazards Acocella 2015
 and references therein On this basis the contributions grouped in this eBook even though appearing distinct in subject
 methods goal and impact should be considered as different aspects of the same system Indeed the selection of these

contributions aims to capture a multidisciplinary and common understanding of our planet with its interconnected processes and challenges. It is important to note that in many cases it has not been easy to select a representative study per specialty and thus the papers included in this eBook should therefore not be considered as the representative ones but rather as a concise selection of key papers. We hope you enjoy reading our first edition of the Editor's Choice eBook.

Science And Technology In Deep Underground Laboratories Aldo Ianni, Sean M. Paling, Carlos Peña Garay, Jeter Hall, 2024-12-31. Deep Underground Laboratories are multidisciplinary research infrastructures with a rock overburden that goes from a few hundred meters to a few kilometers. Presently there are 13 laboratories in operation on three Continents: North America, Europe, Asia, Australia, for a global excavation volume of order 10⁶ m³. New laboratories are being constructed, proposed, including a new one in South America. The main reason to develop an underground infrastructure is related to operate in a less radioactive environment where, in particular, muons from cosmic rays are strongly suppressed. This low background environment opens the possibility to search for very rare events such as low energy neutrino interactions, dark matter direct detection, and neutrinoless double beta decay. These are crucial studies to enhance our understanding of the Universe. In addition, these special environments, in which these infrastructures are located, provide opportunities to carry out many and varied studies on geology, geophysics, biology, and planetary exploration of significant interest and impact in both pure and applied science. A number of technological challenges over the last decades have been faced by scientists working in these

infrastructures As a consequence state of the art facilities are in operation in Underground Laboratories for radio purity assay ultra low temperature detectors quantum computing radon suppression and mitigation advanced machining and next generation gravitational wave detectors
