Education Sarah Witham Bednarz, Jerry T. Mitchell, 2025-01-27 This handbook presents a broad and comprehensive overview of research and practices in geography education at primary and secondary levels from birth to about age 18. It summarizes the current state of knowledge in this sub discipline of geography. Including authors representative of many geography education traditions the book pays equal attention to learning and teaching and to respect student voices and includes rich in case studies evidence based research and specific examples. It also emphasizes ways that geography education can contribute to global concerns about social justice diversity equity and inclusion as well as ways it can help to prepare the next generation of informed critical and reflective members of societies. The book is divided into five sections: Purposes of geography education, Why is it taught, Perspectives on geography education, What is taught, Practices of geography education, How is it organized and taught, Preparation of geography educators, How are geography educators prepared, Possibilities for geography education, What is the future of geography education. By providing broad perspectives and lively and accessible writing this handbook is a useful tool for novice geography educators, teacher educators, educational policy makers, support staff such as librarians and media resource specialists, curriculum developers and assessment experts in many world regions.

Geography Matters! Doreen Massey, John Allen, 1984-11-22 Space and nature have long been the concerns of human geography bound up with a strong sense of the importance of place. Understanding how society changes entails understanding the geography of social change. In this new reader the editors argue for a new way of looking at the relationship between society and its spatial organization between society and nature and between the interdependence and unique character of places. First through a selection of material ranging from the changing geography of class cultures, gender relations, city structures, state power to the processes of international law the readings demonstrate that neither space nor society can be understood independently of the other. Social change involves spatial change and spatial change affects social organization. The two sides of the relation mediate a geography of change. Second a number of the articles explore the relation between society and nature and demonstrate that that too involves a continuous and changing interrelationship. Nature cannot be understood outside of its social interpretation and use equally nature the environment has an impact upon the quality and future of our lives. Third this collection presents an approach to the geography of place which has methodological implications for all those in social science who are concerned with the central problem of appreciating the outcomes without losing sight of general processes of chance. To grasp the dynamic relation between society space and nature is important not only for human geography but for all the social sciences.
