**Hands-On Machine Learning with ML.NET** Jarred Capellman, 2020-03-27

Create, train and evaluate various machine learning models such as regression, classification and clustering using ML.NET Entity Framework and ASP.NET Core. Key Features: Get well versed with the ML.NET framework and its components and APIs using practical examples; Learn how to build, train and evaluate popular machine learning algorithms with ML.NET offerings; Extend your existing machine learning models by integrating with TensorFlow and other libraries.

**Book Description:** Machine learning ML is widely used in many industries such as science, healthcare and research, and its popularity is only growing. In March 2018, Microsoft introduced ML.NET to help .NET enthusiasts in working with ML. With this book, you'll explore how to build ML.NET applications with the various ML models available using C# code. The book starts by giving you an overview of ML and the types of ML algorithms used, along with covering what ML.NET is and why you need it to build ML apps. You'll then explore the ML.NET framework, its components and APIs. The book will serve as a practical guide to helping you build smart apps using the ML.NET library. You'll gradually become well versed in how to implement ML algorithms such as regression, classification and clustering with real world examples and datasets. Each chapter will cover the practical implementation showing you how to implement ML

within .NET applications. You'll also learn to integrate TensorFlow in ML .NET applications. Later you'll discover how to store the regression model housing price prediction result to the database and display the real time predicted results from the database on your web application using ASP.NET Core Blazor and SignalR. By the end of this book you'll have learned how to confidently perform basic to advanced level machine learning tasks in ML .NET. What you will learn: Understand the framework components and APIs of ML .NET using C#; Develop regression models using ML .NET for employee attrition and file classification; Evaluate classification models for sentiment prediction of restaurant reviews; Work with clustering models for file type classifications; Use anomaly detection to find anomalies in both network traffic and login history; Work with ASP.NET Core Blazor to create an ML .NET enabled web application; Integrate pre-trained TensorFlow and ONNX models in a WPF/ML .NET application for image classification and object detection.

**Who this book is for:** If you are a .NET developer who wants to implement machine learning models using ML .NET then this book is for you.
