**THEY WANT TO BUILD THE WORLD WITHOUT US** Alexander Sugiharto, 2025-12-09

The clock is ticking; 2030 is not a distant date; it is the deadline for civilization as we know it. The 2030 Reckoning tears away the polished veneer of innovation to expose the shadowy cabal of global elites and powerful corporations who are weaponizing AI not for progress but for absolute authoritarian control. Technocapitalists, the hyper-wealthy funding the AI revolution, viewing human labor and autonomy as inefficient obstacles to maximum profit. Technofascists, the architects using algorithmic power to design a new rigid social order, a world where every choice is monitored, every dissent is silenced, and every life is managed by a centralized non-human intelligence. INSIDE THIS EXPLOSIVE INVESTIGATION, Every chapter dissects the catastrophic impact of AI development on a different pillar of civilization, revealing the blueprint for global dominance. Humanity, the fusion of man and machine, and the dark agenda to redefine or replace the human soul. Politics, the end of democracy as algorithmic governance takes over, making human choice irrelevant. Economics, the final collapse of labor, the universal basic income trap, and the rise of a cashless, fully monitored economy. The Military, the chilling reality of autonomous weapons and global surveillance nets designed for total submission. Religion, the machine's replacement for faith, purpose, and the divine. Stop viewing AI as a tool; it is the ultimate Trojan Horse, delivering total power into the hands of the elite who seek to finalize their vision for a future without free will. Your time to understand the conspiracy is running out. Read The 2030 Reckoning now and arm yourself with the truth before the future is coded and locked down forever.

*Leadership 2.0 in processes of a sustainable change* Prof. Dr. Michael Kurwan, 2025-06-30 Document from the year 2025 in the subject Leadership and Human Resources Leadership language English abstract In order to successfully implement sustainable changes in a company in the context of change processes strong leadership is required at the top of a company which should have a great deal of empathy and a sure instinct in order to position the company in the market in the long term and profitably In order to successfully shape these sustainable changes it will not be the famous power of the leader of the past but will only work with the involvement of employees in the new world of work in the knowledge age which is characterized by digitalization and artificial intelligence This new form of leadership is also referred to as Leadership 2.0 in which it is important to retain top performers and in particular key personnel in the company in the long term which is a very challenging leadership task in HR management In change processes a fundamental distinction must be made between incremental change management and radical change management While incremental change takes place continuously and is integrated into everyday working life radical change represents a strategic realignment of the company which is largely associated with staff reductions and is intended to change the corporate culture This is particularly true in the case of

restructuring where cost cutting programs play a decisive role in ensuring the long term survival of the company Employees are more willing to go along with incremental change also known as continuous improvement than radical change as they could also be affected by staff cuts This fuels employees fears and therefore often leads to high staff turnover **Openai** Gerard Blokdyk,2017-11-21 Which individuals teams or departments will be involved in OpenAI If substitutes have been appointed have they been briefed on the OpenAI goals and received regular communications as to the progress to date How can the value of OpenAI be defined What is our formula for success in OpenAI What is the total cost related to deploying OpenAI including any consulting or professional services Defining designing creating and implementing a process to solve a business challenge or meet a business objective is the most valuable role In EVERY company organization and department Unless you are talking a one time single use project within a business there should be a process Whether that process is managed and implemented by humans AI or a combination of the two it needs to be designed by someone with a complex enough perspective to ask the right questions Someone capable of asking the right questions and step back and say What are we really trying to accomplish here And is there a different way to look at it This Self Assessment empowers people to do just that whether their title is entrepreneur manager consultant Vice President CxO etc they are the people who rule the future They are the person who asks the right questions to make OpenAI investments work better This OpenAI All Inclusive Self Assessment enables You to be that person All the tools you need to an in depth OpenAI Self Assessment Featuring 700 new and updated case based questions organized into seven core areas of process design this Self Assessment will help you identify areas in which OpenAI improvements can be made In using the questions you will be better able to diagnose OpenAI projects initiatives organizations businesses and processes using accepted diagnostic standards and practices implement evidence based best practice strategies aligned with overall goals integrate recent advances in OpenAI and process design strategies into practice according to best practice guidelines Using a Self Assessment tool known as the OpenAI Scorecard you will develop a clear picture of which OpenAI areas need attention Your purchase includes access details to the OpenAI self assessment dashboard download which gives you your dynamically prioritized projects ready tool and shows your organization exactly what to do next Your exclusive instant access details can be found in your book **Introduction to Generative AI, Second Edition** Numa Dhamani,2026-01-13 Get up to speed quickly with generative AI AI tools like ChatGPT and Gemini automated coding tools like Cursor and Copilot and countless LLM powered agents have become a part of daily life They ve also spawned a storm of misinformation hype and doomsaying that makes it tough to understand exactly what Generative AI actually is and what it can really do Introduction to Generative AI Second Edition delivers a clearly written survey of generative AI fundamentals along with the techniques and strategies you need to use AI safely and effectively In this easy to read introduction you ll learn How large language models LLMs work How to apply AI across personal and professional work The social legal and policy landscape around generative AI Emerging trends like reasoning
