- **Definition:** A **proof** is a sequence of statements, each of which follows logically from the ones (statements) before and leads from a statement that is known to be true, to a statement that is to be proved.
- **Note:** We use standard **2-value logic**, that is a statement is either true or false.

as mummification led to today's biological technology. Innovative pioneers such as Aristotle, Galen, Hippocrates, and Vesalius challenged the limits of knowledge and single-mindedly pursued their work often in the face of blind superstition. In superb lyrical prose, Serafini recreates the ideas and theories of these revolutionaries from ancient times through today against the backdrop of the dogma and prejudices of their time. He explores the inspired revelations that gave birth to such discoveries as the controversial theory of evolution, the humble origins of genetics, the fantastic predictions of quantum mechanics, and the infinite promise of computer technology. Even today, the biological sciences are undergoing rapid and kaleidoscopic changes.
