Time Reversal Focusing Computer Interface Application:

Time-Reversal Focusing for Human Computer Interface Application Hla Myo Tun, Zaw Min Naing, Win Khine Moe, 2015-12-08 In this book the time reversal focusing based on finite difference time domain FDTD method to localize source by using MATLAB GUI There are three analyses of free space model waveguide model and user define model for source location in a perfectly matched layer boundary The simulation results are evaluated to localize the source by using FDTD method in this book This book is appropriate for analyzing the time reversal mirror implementation We have shown the energy spectrum for propagation of acoustics wave in a room to focus by using array of transducers and source In these plots we first transmit the signals from source to the array of transducers and then the signals can be retransmitted back from array of transducers to the source by using time reverse algorithm The application areas of this work are mentioned in this work

Seismic Interferometry Deyan Draganov, Johan O. A. Robertsson, 2008 Seismic Interferometry History and Present Status SEG Geophysics Reprint Series No 26 shows that developments in seismic interferometry the methodology of generating new seismic responses by crosscorrelation have taken an enormous flight since the beginning of this century In 2006 the editors of this volume compiled a supplement to Geophysics dedicated to this new branch of science The 22 papers of the well received supplement recognized by one award for best paper and two honorable mentions for best paper in Geophysics and more than 100 citations in the first 20 months form the basis for this reprint volume The editors have added 50 papers from SEG and other journals including Science Physical Review and Geophysical Research Letters The book contains an editors introduction with extensive references and chapters on seismic interferometry without equations highlights of the history of seismic interferometry from 1968 until 2003 and a more detailed overview of the rapid developments since 2004 Seismic Interferometry is an invaluable source for researchers and students interested in the theory and applications of interferometry in geophysical exploration seismic and EM seismology ultrasonics and underwater acoustics

Tactile Sensing, Information, and Feedback via Wave Propagation Yitian Shao, 2022-02-24 A longstanding goal of haptic engineering is to develop haptic interfaces that can provide realistic sensations of touch A fundamental step towards this goal is to understand what mechanical tactile signals the hand feels during daily touch interactions This book reveals the complex patterns of mechanical waves propagating throughout the hand that can be elicited even by simple touch interactions which helps in expanding existing knowledge of tactile function beyond the region of near skin object contact and inspires new designs for haptic sensing and feedback technologies The first part of this book describes new methods for capturing dynamic spatially distributed tactile signals in the whole hand during natural hand interactions The second part characterizes these signals and evaluates how well and how efficiently they encode the information of touch relating to the transmission of mechanical waves in hand tissues The final part demonstrates how these findings can be utilized to create novel haptic effects and tactile displays

Propagation provides a unique view of tactile sensing and feedback and will appeal to researchers engineers and students who are interested in learning cutting edge haptic science and technology
