The Dappled World Nancy Cartwright:

The Dappled World Nancy Cartwright, 1999-09-23 This important and innovative collection of essays argues for a patchwork of laws of nature

A Philosopher Looks at Science Nancy Cartwright, 2022-06-30 A fresh provocative and engaging treatment of what science really amounts to in society and of what it can do

Science, Democracy, and Curriculum Studies John A. Weaver, 2018-08-30 In this book John A Weaver suggests curriculum studies scholars need to engage more in science matters It offers a review of science studies writing from Ludwick Fleck and Thomas Kuhn to Philip Mirowski The volume includes chapters on the rhetoric of science with a focus on the history of rhetoric and economics then on the rhetoric of models statistics and data a critique of neoliberalism and its impact on science policy and the foundations of democracy Harry Collins and Robert Evans theory of expertise followed by chapters on feminism with a focus on the work of Sharon Traweek Karen Barad and Vinciane Despret postcolonial thought with attention paid to the work of Daniela Bleichmar Londa Schiebinger Judith Carney Sylvia Wynter Paul Gilroy and Sandra Harding and a final chapter on Nietzsche's philosophy of science Each section is introduced by an interlude drawing on autobiographical connections between curriculum studies and science studies

What the Heavens Declare Lydia Jaeger, 2012-06-12 In her latest book What the Heavens Declare Lydia Jaeger provides a detailed analysis of the role of the theistic doctrine of creation in the rise of modern science with a particular focus on the natural order As the author explains despite the common use of the expression laws of nature by both scientists and laymen there is a long standing tradition of philosophical debate about and even refusal of the notion that laws of nature might exist independently of a divine or human mind This work attempts to account for natural order in harmony with the religious worldview that significantly contributed to the original context in which modern science began the world seen as the creation of the triune God

Lonergan, Meaning and Method Andrew Beards, 2016-09-22 Bernard Lonergan 1904-84 is acknowledged as one of the most significant philosopher theologians of the 20th century Lonergan Meaning and Method in many ways complements Andrew Beards previous book on Lonergan Insight and Analysis Bloomsbury 2010 Andrew Beards applies Lonergan's thought and brings it into critical dialogue and discussion with other contemporary philosophical interlocutors principally from the analytical tradition He also introduces themes and arguments from the continental tradition as well as offering interpretative analysis of some central notions in Lonergan's thought that are of interest to all who wish to understand the importance of Lonergan's work for philosophy and Christian theology Three of the chapters focus upon areas of fruitful exchange and debate between Lonergan's thought and the work of three major figures in current analytical philosophy Nancy Cartwright Timothy Williamson and Scott Soames The discussion also ranges across such topics as meaning theory metaphilosophy epistemology philosophy of science and aesthetics

Nancy Cartwright Matthias Paul, 1999 Nancy Cartwright has been a dominant figure in the philosophy of science for more than twenty years In the early eighties she wrote her influential book How the Laws of Physics Lie which was generally perceived

to be a challenge to a realistic conception of scientific theories Over the last decade her focus has shifted to issues concerning what she calls fundamentalism This is the position that laws of nature are basic and that other things come from them Cartwright rejects this story and replaces it by the view that capacities are basic and that laws obtain on account of the repeated Operation of a system of components with stable capacities in particularly fortunate circumstances This book focuses mainly on Cartwright s recent work on laws and capacities It is the outcome of the second series of the Munster lectures in philosophy which took place on May 5 6 1998 This volume comprises a revised version of Cartwright s evening talk 12 colloquium papers which Cartwright considered to be extremely thought provoking followed by replies Cartwright makes to each of them

Sellars and Davidson in Dialogue Willem A. deVries, Marc A. Joseph, 2025-06-27 Wilfrid Sellars and Donald Davidson were two of the most influential American philosophers of the 20th century This volume explores the deep similarities and differences between these two philosophers Both Sellars and Davidson worked through the mid to late 20th century re evaluation of the empiricist inheritance that shaped what became analytic philosophy and both are critical of key elements of that picture In the broadest terms both philosophers challenge the solipsistic mentalistic conception of knowledge and meaning that informs the tradition and set in its place systems of interrelated views that prioritize a holistic and social conception of mind action and language At the same time there are several differences in method and philosophical semantics that divide Sellars and Davidson The chapters in this volume address the deep relations of Sellars and Davidson s views on mind language and knowledge They demonstrate how despite coming from different assumptions and methodologies Sellars and Davidson converge on a view that essentially erases the philosophy of language as a separate discipline and embeds it in the philosophy of action Sellars and Davidson in Dialogue will appeal to scholars and advanced students interested in the history of analytic philosophy epistemology philosophy of language and philosophy of mind

Representation and Productive Ambiguity in Mathematics and the Sciences Emily R. Grosholz, 2007-08-30 Emily Grosholz offers an original investigation of demonstration in mathematics and science examining how it works and why it is persuasive Focusing on geometrical demonstration she shows the roles that representation and ambiguity play in mathematical discovery She presents a wide range of case studies in mechanics topology algebra logic and chemistry from ancient Greece to the present day but focusing particularly on the seventeenth and twentieth centuries She argues that reductive methods are effective not because they diminish but because they multiply and juxtapose modes of representation Such problem solving is she argues best understood in terms of Leibnizian analysis the search for conditions of intelligibility Discovery and justification are then two aspects of one rational way of proceeding which produces the mathematician s formal experience Grosholz defends the importance of iconic as well as symbolic and indexical signs in mathematical representation and argues that pragmatic as well as syntactic and semantic considerations are indispensable for mathematical reasoning By taking a close look at the way results are presented on the page in mathematical and biological chemical and mechanical texts she

shows that when two or more traditions combine in the service of problem solving notations and diagrams are subtly altered multiplied and juxtaposed and surrounded by prose in natural language which explains the novel combination Viewed this way the texts yield striking examples of language and notation that are irreducibly ambiguous and productive because they are ambiguous Grosholtz's arguments which invoke Descartes Locke Hume and Kant will be of considerable interest to philosophers and historians of mathematics and science and also have far reaching consequences for epistemology and philosophy of language *Rethinking Order* Nancy Cartwright, Keith Ward, 2016-06-30 This book presents a radical new picture of natural order The Newtonian idea of a cosmos ruled by universal and exceptionless laws has been superseded replaced by a conception of nature as a realm of diverse powers potencies and dispositions a dappled world There is order in nature but it is more local diverse piecemeal open and emergent than Newton imagined In each chapter expert authors expound the historical context of the idea of laws of nature and explore the diverse sorts of order actually presupposed by work in physics biology and the social sciences They consider how human freedom might be understood and explore how Newton's idea of a universal designer might be revised in this new context They argue that there is not one unified totalizing program of science aiming at the completion of one closed causal system We live in an ordered universe but we need to rethink the classical idea of the laws of nature in a more dynamic and creatively diverse way **Philosophy and**

Engineering: Reflections on Practice, Principles and Process Diane P Michelfelder, Natasha McCarthy, David E. Goldberg, 2014-01-13 Building on the breakthrough text *Philosophy and Engineering An Emerging Agenda* this book offers 30 chapters covering conceptual and substantive developments in the philosophy of engineering along with a series of critical reflections by engineering practitioners The volume demonstrates how reflective engineering can contribute to a better understanding of engineering identity and explores how integrating engineering and philosophy could lead to innovation in engineering methods design and education The volume is divided into reflections on practice principles and process each of which challenges prevalent assumptions and commitments within engineering and philosophy The volume explores the ontological and epistemological dimensions of engineering and exposes the falsity of the commonly held belief that the field is simply the application of science knowledge to problem solving Above all the perspectives collected here demonstrate the value of a constructive dialogue between engineering and philosophy and show how collaboration between the disciplines casts light on longstanding problems from both sides The chapters in this volume are from a diverse and international body of authors including philosophers and engineers and represent a highly select group of papers originally presented in three different conferences These are the 2008 Workshop on Philosophy and Engineering WPE 2008 held at the Royal Academy of Engineering the 2009 meeting of the Society for Philosophy and Technology SPT 2009 at the University of Twente in the Netherlands and the Forum on Philosophy Engineering and Technology fPET 2010 held in Golden Colorado at the Colorado School of Mines **New Directions in the Philosophy of Social Science** Daniel Little, 2016-09-12 Philosophy matters for

the social sciences Our world faces ever more complex and hazardous problems and social science ontology and methods need to be adequate to the changing nature of the social realm Imagination and new ways of thinking are crucial to the social sciences Based on Daniel Little s popular blog this book provides an accessible introduction to the latest developments and debates in the philosophy of social science Each chapter addresses a leading issue in the philosophy of the social sciences today Little advocates for an actor centred sociology endorsing the idea of meso level causation and proposing a solution to the problem of mechanisms or powers The book draws significant conclusions from the facts of complexity and heterogeneity in the social world The book develops a series of arguments that serve to provide a new framework for the philosophy of social science through deep engagement with social scientists and philosophers in the field Topics covered include the heterogeneity and plasticity of the social world the complexity of social causation the nuts and bolts of causal mechanisms the applicability of the theory of causal powers to the social world the intellectual coherence of the perspective of scientific realism in application to social science [A Research Annual](#) Warren J. Samuels, Jeff Biddle, 2003-12-31 Annotation The collection includes refereed articles on a variety of subjects in the history of economic thought Adam Smith J M Clark and F H Knight F H Knight and M A Copeland S Bulgakov and interwar monetary and business cycle theory Review essays on new publications cover such areas as methodology Veblen economics and religion Hayek economic philosophy and ideology J S Mill and evolution theory **Nancy Cartwright's Philosophy of Science** Luc Bovens, Carl Hoefer, Stephan Hartmann, 2008-06-03 Nancy Cartwright is one of the most distinguished and influential contemporary philosophers of science Despite the profound impact of her work there is neither a systematic exposition of Cartwright s philosophy of science nor a collection of articles that contains in depth discussions of the major themes of her philosophy This book is devoted to a critical assessment of Cartwright s philosophy of science and contains contributions from Cartwright s champions and critics Broken into three parts the book begins by addressing Cartwright s views on the practice of model building in science and the question of how models represent the world before moving on to a detailed discussion of methodologically and metaphysically challenging problems Finally the book addresses Cartwright s original attempts to clarify profound questions concerning the metaphysics of science With contributions from leading scholars such as Ronald N Giere and Paul Teller this unique volume will be extremely useful to philosophers of science the world over *Contagion* ,2004 **Simple Words and Subtle Things** Brian Epstein, 2004 **Philosophia Naturalis** ,1998 [The Philosopher's Index](#) ,2007 Vols for 1969 include a section of abstracts **International Studies in Philosophy** ,2003 [Book Review Index](#) ,2003 Vols 8 10 of the 1965 1984 master cumulation constitute a title index [Humanities Index](#) ,2002
