The Design and Conduct of Meaningful Experiments Involving Human Participants R. Barker Bausell, 2015-01-29

The Design and Conduct of Meaningful Experiments Involving Human Participants combines an introduction to scientific culture and ethical mores with specific experimental design and procedural content. Author R. Barker Bausell assumes no statistical background on the part of the reader, resulting in a highly accessible text. *The Design and Conduct of Meaningful Experiments Involving Human Participants* R. Barker Bausell, 2015-01-29. Designing and conducting experiments involving human participants requires a skillset different from that needed for statistically analyzing the resulting data. The Design and Conduct of Meaningful Experiments Involving Human Participants combines an introduction to scientific culture and ethical mores with specific experimental design and procedural content. Author R. Barker Bausell assumes no statistical background on the part of the reader, resulting in a highly accessible text. Clear instructions are provided on topics ranging from the selection of a societally important outcome variable to potentially efficacious interventions to the conduct of the experiment itself. Early chapters introduce the concept of experimental design in an intuitive manner involving both hypothetical and real life examples of how people make causal inferences. The fundamentals of formal experimentation, randomization, and the use of control groups are introduced in the same manner, followed by the presentation and explanation of common and later more advanced designs. Replete with synopses of examples from the journal literature and supplemented by 25 experimental principles, this book is designed to serve as an interdisciplinary supplementary text for research methods courses in the educational, psychological, behavioral, social, and health sciences. It also serves as an excellent primary text for methods seminar courses.

The Problem with Science R. Barker Bausell, 2021-01-26. Recent events have vividly underscored the societal importance of science, yet the majority of the public are unaware that a large proportion of published scientific results are simply wrong. *The Problem with Science* is an exploration of the manifestations and causes of this scientific crisis, accompanied by a description of the very promising corrective initiatives largely developed over the past decade to stem the spate of irreproducible results that have come to characterize many of our sciences. More importantly, Dr. R. Barker Bausell has designed it to provide guidance to practicing and aspiring scientists regarding how to change the way in which science has come to be both conducted and reported in order to avoid producing false positive irreproducible results in their own work and to change those institutional practices, primarily but not exclusively involving the traditional journal publishing process and the academic reward system that have unwittingly contributed to the present crisis. There is a need for change in the scientific culture itself: a culture which prioritizes conducting research correctly in order to get things right rather than simply getting it published.

The Science of the Obvious R. Barker Bausell, 2017-09-11. This book poses and ultimately answers the question of whether the public schools would have been affected if no educational research had been conducted during this century. To answer this question, 12 genres of educational research are evaluated. The genres are

accompanied by non technical annotated synopses examples of each A case is made that the science of education as a whole is repetitive non cumulative and is characterized by a circular rather than a linear trajectory
