camera obscura and created realistic drawings Using the camera obscura Daguerre made an early photograph In partnership with Niepce Daguerre sought to make a lasting image Though Niepce died in 1833 Daguerre continued to experiment Between 1835 and 1837 he perfected his process an early form of photography Book jacket **The Daguerreotype in America** Beaumont Newhall,1971 *America and the Daguerreotype* John Wood,1991 **The Silver Canvas** Bates Lowry,Isabel Barrett Lowry,2000-02-03 By the middle of the nineteenth century the most common method of photography was the daguerreotype Louis Jacques Mand Daguerre's miraculous invention that captured in a camera visual images on a highly polished silver surface through exposure to light In this book are presented nearly eighty masterpieces many never previously published from the J Paul Getty Museum's extensive daguerreotype collection *American Hand Book of the Daguerreotype* S.D. Humphrey,2025-10-21 Reproduction of the original The Antigonus publishing house specialises in the publication of reprints of historical books We make sure that these works are made available to the public in good condition in order to preserve their cultural heritage **French Daguerreotypes** Janet E. Buerger,International Museum of Photography at George Eastman House,1989-11-14 Upon its introduction in 1839 the daguerreotype was hailed as a magical reflection of reality Today these early examples of the first practical photographic process offer fascinating windows into the past The daguerreotypes collected here not only document the birth of photography and its aesthetic and historical legacy but also provide insight into French art and culture Lavishly illustrated this volume is the first complete catalog of the French daguerreotype collection of the International Museum of Photography at George Eastman House Janet E Buerger uses this remarkable collection of images to produce a cultural history of the daguerreotype's most learned following an elite group of mid nineteenth century intellectuals who sought to understand and develop the usefulness potential and beauty of this camera image This varied group including entrepreneurs painters scientists and historians enables Buerger to trace the influence of photography into virtually every area of nineteenth century European intellectual life *Humphrey's Journal of the Daguerreotype and Photographic Arts and the Sciences and Arts Pertaining to Heliography* ,1855 **Likeness and Landscape** Dolores Ann Kilgo,1994 Described by his contemporaries as Daguerre's most dedicated follower Thomas M Easterly did most of his work in the relative obscurity of St Louis This lavishly illustrated account of his twenty seven year career established him as a new master in the ranks of nineteenth century photographers It will be an essential addition to the libraries of scholars and collectors Easterly's subjects range far beyond the traditional daguerrean portrait Of his surviving inventory of over 600 plates in the collection of the Missouri Historical Society over 140 are views of St Louis his native New England and the Niagara Falls region of New York Three series of American Indian portraits constitute the earliest dated photographic record of Plains tribal members A series of studio portraits of ordinary people and celebrities demonstrate a remarkable mastery of technique placing Easterly decades ahead of his time *The Scenic Daguerreotype* John Wood,1995 Too often photographic historians have given credit to the calotype for establishing our sense and standard

of the photographic when in reality it was the daguerreotype that first taught us how to see photographically taking us beyond portraiture to a standard for scenic images that is still with us today Here is the first study of scenic daguerreotypes from around the world and the largest assemblage of them ever to be presented in book form Contending that L J M Daguerre was at the forefront of the romantic revolution Wood discusses Daguerre's work in the context of John Constable J M W Turner and Caspar David Friedrich He also draws parallels between early landscape photography the poetry of William Wordsworth and William Gilpin's notions of the picturesque which influenced both travel and the way nineteenth century men and women began to view the landscape around them Wood's selection of more than a hundred images presents the best surviving examples of the scenic daguerreotype They include views of the Acropolis Egypt and China of mountains and Alpine scenery of Pompeii Venice and the temples of Rome of the California Gold Rush and other American scenes plus daguerreotypes from Germany Switzerland Sweden Martinique and Brazil [The Early American Daguerreotype](#) Sarah Kate Gillespie, 2016-02-19 The American daguerreotype as something completely new a mechanical invention that produced an image a hybrid of fine art and science and technology The daguerreotype invented in France came to America in 1839 By 1851 this early photographic method had been improved by American daguerreotypists to such a degree that it was often referred to as the American process The daguerreotype now perhaps mostly associated with stiffly posed portraits of serious visaged nineteenth century personages was an extremely detailed photographic image produced through a complicated process involving a copper plate light sensitive chemicals and mercury fumes It was as Sarah Kate Gillespie shows in this generously illustrated history something wholly and remarkably new a product of science and innovative technology that resulted in a visual object It was a hybrid with roots in both fine art and science and it interacted in reciprocally formative ways with fine art science and technology Gillespie maps the evolution of the daguerreotype as medium and as profession from its introduction to the ascendancy of the American process tracing its relationship to other fields and the professionalization of those fields She does so by recounting the activities of a series of American daguerreotypists including fine artists scientists and mechanical tinkerers She describes for example experiments undertaken by Samuel F B Morse as he made the transition from artist to inventor how artists made use of the daguerreotype both borrowing conventions from fine art and establishing new ones for a new medium the use of the daguerreotype in various sciences particularly astronomy and technological innovators who drew on their work in the mechanical arts By the 1860s the daguerreotype had been supplanted by newer technologies Its rise and fall represents an early instance of the ever constant stream of emerging visual technologies
