## **The Ecology And Evolution Of Ant Plant Interactions Interspecific Interactions:**

The Ecology and Evolution of Ant-Plant Interactions Victor Rico-Gray, Paulo S. Oliveira, 2008-09-15 Ants are probably the most dominant insect group on Earth representing ten to fifteen percent of animal biomass in terrestrial ecosystems. Flowering plants meanwhile owe their evolutionary success to an array of interspecific interactions such as pollination, seed dispersal and herbivory that have helped to shape their great diversity. *The Ecology and Evolution of Ant Plant Interactions* brings together findings from the scientific literature on the coevolution of ants and plants to provide a better understanding of the unparalleled success of these two remarkable groups of interspecific interactions in general and ultimately of terrestrial biological communities. *The Ecology and Evolution of Ant Plant Interactions* synthesizes the dynamics of ant-plant interactions including the sources of variation in their outcomes. Victor Rico Gray and Paulo S. Oliveira capture both the emerging appreciation of the importance of these interactions within ecosystems and the developing approaches that place studies of these interactions into a broader ecological and evolutionary context. The collaboration of two internationally renowned scientists, *The Ecology and Evolution of Ant Plant Interactions* will become a standard reference for understanding the complex interactions between these two taxa.

**Ant-Plant Interactions** Paulo S. Oliveira, Suzanne Koptur, 2017-08-17 Ants are probably the most dominant insect family on earth and flowering plants have been the dominant plant group on land for more than 100 million years. In recent decades human activities have degraded natural environments with unparalleled speed and scale making it increasingly apparent that interspecific interactions vary not only under different ecological conditions and across habitats but also according to anthropogenic global change. This is the first volume entirely devoted to the anthropogenic effects on the interactions between these two major components of terrestrial ecosystems. A first-rate team of contributors report their research from a variety of temperate and tropical ecosystems worldwide including South Central and North America, Africa, Japan, Polynesia, Indonesia, and Australia. It provides an in-depth summary of the current understanding for researchers already acquainted with insect-plant interactions yet is written at a level to offer a window into the ecology of ant-plant interactions for the mostly uninitiated international scientific community.

**Tropical Zoology**, 2007

**Ant-plant Interactions** Camilla R. Huxley, 1991 This book presents current research on all types of ant-plant interactions and concentrates on understanding these often complex relationships in evolutionary and ecological terms. The range of interactions varies from herbivory, leaf-cutter ants to complex symbiosis. Many ants prey on plant pests thus protecting the plant from harm, receiving in exchange nectar and/or nest sites. In some cases the ants tend and protect other insects such as butterfly larvae or Homopterans which include the aphids and cicadas which may benefit the ants at the expense of both the host plant and the other insects. Some ants are known to be seed dispersers and in at least one plant

cocoa they appear to affect rates of pollination A significant proportion of these interactions exhibit a high degree of mutualism making this book part of a growing literature on the ecological determinants of mutualistic behaviour The thirty seven chapters by more than fifty contributors range in geographical coverage from northern and southern temperate zones to the New World tropics to Australia and South east Asia The emphasis throughout even in the more descriptive chapters is on possible explanations for observed phenomena Workers in ecology evolution and behavior will welcome this compendium of information on a subject that has become a modern testing ground for evolutionary ecology **The Evolutionary**
