The Dead Of Adam Evolution And Its Impact On Western Tought:

The Death of Adam John C. Greene,1961 ***The Death of Adam*** Vearl Robert Smith,1959 ***The Death of Adam*** John Colton Greene (Historian, United States),1959 ***Nineteenth-Century Religious Thought in the West: Volume 3*** Ninian Smart,John Clayton,Patrick Sherry,Steven T. Katz,1988-07-01 The successful three volumes of Nineteenth Century Religious Thought in the West provide a fresh appraisal of the most important thinkers of that time Soames essays centre on major figures of the period others cover topics trends and schools of thought between the French Revolution and the First World War ***Adam's Ancestors*** David N. Livingstone,2011-03-15 Winner of the Selection for Professional Reading List of the U S Marine Corps Although the idea that all human beings are descended from Adam is a long standing conviction in the West another version of this narrative exists human beings inhabited the Earth before or alongside Adam and their descendants still occupy the planet In this engaging and provocative work David N Livingstone traces the history of the idea of non adamic humanity and the debates surrounding it from the Middle Ages to the present day From a multidisciplinary perspective Livingstone examines how this alternative idea has been used for cultural religious and political purposes He reveals how what began as biblical criticism became a theological apologetic to reconcile religion with science evolution in particular and was later used to support arguments for white supremacy and segregation From heresy to orthodoxy from radicalism to conservatism from humanitarianism to racism Adam s Ancestors tells an intriguing tale of twists and turns in the cultural politics surrounding the age old question Where did we come from ***The New Science of Geology*** Martin J.S. Rudwick,2023-04-14 The science of geology was constructed in the decades around 1800 from earlier practices that had been significantly different in their cognitive goals In the studies collected here Martin Rudwick traces how it came to be recognised as a new kind of natural science because it was constituted around the idea that the natural world had its own history The earth had to be understood not only in relation to unchanging natural laws that could be observed in action in the present but also in terms of a pre human past that could be reliably known even if not directly observable and its traces only fragmentarily preserved In contrast to this radically novel sense of nature s own contingent history the earth s unimaginably vast timescale was already taken for granted by many naturalists though not yet by the wider public and the concurrent development of biblical scholarship precluded any significant sense of conflict with religious tradition A companion volume Lyell and Darwin Geologists Studies in the Earth Sciences in the Age of Reform was published in 2005 ***Continuing Bonds with the Dead*** Harold K. Bush,2016-03-15 Continuing Bonds with the Dead explores the redemptive literary achievements of five nineteenth century American authors who lost a son or daughter In it Harold K Bush illuminates America s evolving cultural attitudes about death and grief ***The Dalhousie Review*** Herbert Leslie Stewart,1961 ***Unifying Biology*** Vassiliki Betty Smocovitis,1996-12 Unifying Biology offers a historical reconstruction of one of the most important yet elusive episodes in the history of modern science the evolutionary synthesis of the 1930s and 1940s For

more than seventy years after Darwin proposed his theory of evolution it was hotly debated by biological scientists It was not until the 1930s that opposing theories were finally refuted and a unified Darwinian evolutionary theory came to be widely accepted by biologists Using methods gleaned from a variety of disciplines Vassiliki Betty Smocovitis argues that the evolutionary synthesis was part of the larger process of unifying the biological sciences At the same time that scientists were working toward a synthesis between Darwinian selection theory and modern genetics they were according to the author also working together to establish an autonomous community of evolutionists Smocovitis suggests that the drive to unify the sciences of evolution and biology was part of a global philosophical movement toward unifying knowledge In developing her argument she pays close attention to the problems inherent in writing the history of evolutionary science by offering historiographical reflections on the practice of history and the practice of science Drawing from some of the most exciting recent approaches in science studies and cultural studies she argues that science is a culture complete with language rituals texts and practices Unifying Biology offers not only its own new synthesis of the history of modern evolution but also a new way of doing history

European Intellectual History Since Darwin and Marx W. Warren Wagar,1967 For the European intellectual historian the period since 1870 falls into four phases the positivist generation of the Seventies and Eighties when the work of Darwin and Marx had reached full fruition the anti intellectualist generation of 1890 1914 in which Dilthey and Freud are representative figures the age of the World Wars which shattered faith in progress and the contemporary period since 1945 a kind of ice age of the spirit when even iconoclasm is dead and fresh departures are rare Without exhausting the rich variety of thought during the past hundred years each of the essays presented here takes a broad synoptic view of a major trend in the history of ideas seen in the context of the times Author **Journal of the History of Ideas** ,1962 An international quarterly devoted to intellectual history **E.T.
