   The Description Logic Handbook Franz Baader,2003-01-09 Description Logics are a family of knowledge representation languages that have been studied extensively in Artificial Intelligence over the last two decades They are embodied in several knowledge based systems and are used to develop various real life applications The Description Logic Handbook provides a thorough account of the subject covering all aspects of research in this field namely theory implementation and applications Its appeal will be broad ranging from more theoretically oriented readers to those with more practically oriented interests who need a sound and modern understanding of knowledge representation systems based on Description Logics The chapters are written by some of the most prominent researchers in the field introducing the basic technical material before taking the reader to the current state of the subject and including comprehensive guides to the literature In sum the book will serve as a unique reference for the subject and can also be used for self study or in conjunction with Knowledge Representation and Artificial Intelligence courses   **The Description Logic Handbook** Franz Baader,2003 The Description Logic Handbook covers all aspects of the research in the field of knowledge representation Written by some of the most prominent researchers in the field and covering the basic technical material and implementational aspects it is both a unique reference and a self study guide   The Description Logic Handbook Franz Baader,2014-05-14 Description logics are a family of knowledge representation languages that have been studied in artificial intelligence over the last two decades They are embodied in knowledge based systems and are used to develop various applications This book provides a thorough account of the subject   **Description Logic, Theory Combination, and All That** Carsten Lutz,Uli Sattler,Cesare Tinelli,Anni-Yasmin Turhan,Frank Wolter,2019-06-25 This Festschrift has been put together on the occasion of Franz Baader s 60th birthday to celebrate his fundamental and highly influential scientific contributions The 30 papers in this volume cover several scientific areas that Franz Baader has been working on during the last three decades including description logics term rewriting and the combination of decision procedures We hope that readers will enjoy the articles gathered in Franz s honour and appreciate the breadth and depth of his favourite areas of computer science   **Language and Automata Theory and Applications** Frank Drewes,Carlos Martín-Vide,Bianca Truthe,2017-02-14 This book constitutes the refereed proceedings of the 11th International Conference on Language and Automata Theory and Applications LATA 2017 held in Ume Sweden in March 2017 The 31 revised full papers presented together with 4 invited talks were carefully reviewed and selected from 73 submissions The papers cover the following topics algorithmic learning and semantics automata and logics combinatorics on words compression and pattern matching complexity finite automata grammars languages and parsing graphs and Petri Nets non classical automata and pushdown automata and systems   **Semantic Web Engineering in the Knowledge Society** Cardoso, Jorge,Lytras, Miltiadis D.,2008-10-31 This book lays the foundations for understanding the concepts and technologies behind the Semantic Web Provided by publisher   *A Proof Theory for Description Logics*

Alexandre Rademaker,2012-05-17 Description Logics DLs is a family of formalisms used to represent knowledge of a domain They are equipped with a formal logic based semantics Knowledge representation systems based on description logics provide various inference capabilities that deduce implicit knowledge from the explicitly represented knowledge A Proof Theory for Description Logics introduces Sequent Calculi and Natural Deduction for some DLs ALC ALCQ Cut elimination and Normalization are proved for the calculi The author argues that such systems can improve the extraction of computational content from DLs proofs for explanation purposes   Ontologies for Agents: Theory and Experiences Valentina Tamma,Stephen Cranefield,Timothy W. Finin,Steven Willmott,2006-03-30 There is a growing interest in the use of ontologies for multi agent system app cations On the one hand the agent paradigm is successfully employed in those applications where autonomous loosely coupled heterogeneous and distributed systems need to interoperate in order to achieve a common goal On the other hand ontologies have established themselves as a powerful tool to enable kno edge sharing and a growing number of applications have bene ted from the use of ontologies as a means to achieve semantic interoperability among heterogeneous distributed systems In principle ontologies and agents are a match made in heaven that has failed to happen What makes a simple piece of software an agent is its ability to communicate in a social environment to make autonomous decisions and to be proactive on behalf of its user Communication ultimately depends on und standing the goals preferences and constraints posed by the user Autonomy is theabilitytoperformataskwithlittleornouserintervention whileproactiveness involves acting autonomously with no need for user prompting Communication but also autonomy and proactiveness depend on knowledge The ability to c municate depends on understanding the syntax terms and structure and the semantics of a language Ontologies provide the terms used to describe a domain and the semantics associated with them In addition ontologies are often comp mented by some logical rules that constrain the meaning assigned to the terms These constraints are represented by inference rules that can be used by agents to perform the reasoning on which autonomy and proactiveness are based   **Advanced Materials and Computer Science** Garry Zhu,2011-04-19 Selected peer reviewed paper from 2011 International Conference on Advanced Materials and Computer Science ICAMCS 2011 May 1 2 2010 in Chengdu China   **Engineering Safe and Trustworthy Cyber Physical Systems** Martin Fränzle,Jürgen Niehaus,Bernd Westphal,2025-09-30 This Festschrift is dedicated to Werner Damm a pioneering researcher and practitioner in cyber physical systems Werner received his PhD in 1981 from RWTH Aachen and held the Chairs for Computer Architecture and Safety Critical Systems at Carl von Ossietzky Universit t Oldenburg from where he coordinated foundational research projects such as the Collaborative Research Center Automatic Verification and Analysis of Complex Systems AVACS funded by the German Science Foundation He has been a founder or board member of many projects associations companies and events including the applied research institute OFFIS BTC Embedded Systems providing testing solutions for automotive systems SafeTRANS a non profit industrial and academic
