Quality Software Through Reuse and Integration Stuart H. Rubin, Thouraya Bouabana-Tebibel, 2017-08-15 This book presents 13 high quality research articles that provide long sought after answers to questions concerning various aspects of reuse and integration Its contents lead to the inescapable conclusion that software hardware and design productivity including quality attributes is not bounded It combines the best of theory and practice and contains recipes for increasing the output of our productivity sectors The idea of improving software quality through reuse is not new After all if software works and is needed why not simply reuse it What is new and evolving however is the idea of relative validation through testing and reuse and the abstraction of code into frameworks for instantiation and reuse Literal code can be abstracted These abstractions can in turn yield similar codes which serve to verify their patterns There is a taxonomy of representations from the lowest level literal codes to their highest level natural language descriptions As a result product quality is improved in proportion to the degree of reuse at all levels of abstraction Any software that is in theory complex enough to allow for self reference cannot be certified as being absolutely valid The best that can be attained is a relative validity which is based on testing Axiomatic denotational and other program semantics are more difficult to verify than the codes which they represent But are there any limits to testing And how can we maximize the reliability of software or hardware products through testing These are essential questions that need to be addressed and will be addressed herein Descriptive Taxonomy Mark F.

Watson, Chris H. C. Lyal, Colin A. Pendry, 2015-01-08 In an age when biodiversity is being lost at an unprecedented rate it is vital that floristic and faunistic information is up to date reliable and easily accessible for the formulation of effective conservation strategies Electronic data management and communication are transforming descriptive taxonomy radically enhancing both the collection and dissemination of crucial data on biodiversity This volume is written by scientists at the forefront of current developments of floras and faunas along with specialists from applied user groups The chapters review novel methods of research development and dissemination which aim to maximise the relevance and impact of data Regional case studies are used to illustrate the outputs and impacts of taxonomic research Integrated approaches are presented which have the capacity to accelerate the production of floras and faunas and to better serve the needs of a widening audience
