**TCP/IP Tutorial and Technical Overview** Lydia Parziale, Dr. Wei Liu, Carolyn Matthews, Nicolas Rosselot, Chuck Davis, Jason Forrester, David T. Britt, IBM Redbooks, 2006-12-19 The TCP IP protocol suite has become the de facto standard for computer communications in today's networked world. The ubiquitous implementation of a specific networking standard has led to an incredible dependence on the applications enabled by it. Today we use the TCP IP protocols and the Internet not only for entertainment and information but to conduct our business by performing transactions, buying and selling products and delivering services to customers. We are continually extending the set of applications that leverage TCP IP, thereby driving the need for further infrastructure support. It is our hope that both the novice and the expert will find useful information in this publication.

Principles of Computer Systems and Network Management Dinesh Chandra Verma,2010-01-23 As computer systems and networks have evolved and grown more complex the role of the IT department in most companies has transformed primarily to ensuring that they continue to operate without disruption IT spending as reported by a variety of studies shows the trend that most of the expenses associated with IT are related to the task of operating and managing installed computer systems and applications Furthermore the growth in that expense category is outstripping the expense associated with developing new applications As a consequence there is a pressing need in the companies and organizations to find qualified people who can

manage the installed base of computer systems and networks This marks a significant shift from the previous trend in companies where the bulk of the IT department expenses were targeted on development of new computer applications The shift from developing new applications to managing existing systems is a natural consequence of the maturity of IT industry Computers are now ubiquitous in every walk of life and the number of installed successful applications grows steadily over the time Each installed successful application in a company lasts for a long duration Consequently the number of installed applications is much larger than the number of projects focused on developing new applications While there always will be new applications and systems being developed within companies the predominance of managing and operating existing applications is likely to continue
