[App and Website Accessibility](#)

Developments and Compliance Strategies Akgül, Yakup, 2021-08-13 In the present digital world the growing number of internet users has made web quality an important factor for accessing online services and increasing the customer base of an organization. The advances in information technology and the internet have opened new dimensions in many different industries. Currently accessibility research is an active area of research. Specifically, access for everyone regardless of disability has become an essential aspect of web development. As webpages will be used by both nondisabled and disabled individuals, web pages must be designed with a technical criterion that fits universal needs. The ambition to make websites barrier free is not limited to standards and laws but has been on the agendas of all governments and public agencies recently and this universality of websites is a fundamental area of research. *App and Website Accessibility Developments and Compliance Strategies* intends to provide theoretical and practical contributions for the accessibility of websites for both disabled and nondisabled individuals. This book discusses how web quality parameters like usability and accessibility are being evaluated for their universal design and accessibility by different types of disabled individuals. The chapters cover the current methodologies for evaluation, accessible design criteria, inclusive practices in web and app development and policies and interventions across different types of websites. This book is ideally intended for web developers, designers, software engineers, IT specialists, social organizations, governments, practitioners, researchers, academicians, and students in the usability and accessibility of websites for disabled individuals.

*Architectural Framework for Web Development and Micro Distributed Applications* Rodriguez, Guillermo, 2023-04-17 In recent years we have ushered in a new age where applications will become smaller distributed JavaScript laden microservices infused and utilize the hardware of the client to operate. A new paradigm has been forced upon us by the large search providers and because of this we can now leverage them to help our applications obtain influence where our applications become the voice of authority on the internet and consequently help our organizations reap the benefits of mass adoption. To better understand this we must first consider the history that has taken us to where we find ourselves. *Architectural Framework for Web Development and Micro Distributed Applications* helps readers to come to an understanding of how the indexing domain may be leveraged by this new wave of JavaScript applications that have been termed micro distributed applications and by whose creation and implementation will allow the enterprise to reap the benefit of influence by the existing search systems that the masses utilize. It helps to fill in the picture of the evolution that has occurred and will continue to occur in web development whereby the new breed of applications will become JavaScript laden and highly distributed and whereby the businesses that implement them will stand a chance to win the indexing race and consequently stand to win the attention of the masses. Covering topics such as distributed systems, search engine optimization and software as a service this premier reference source is a dynamic resource for web developers, students and educators of higher education, software developers, technical personnel, IT managers, computer scientists, librarians, researchers and academicians.
