## **Writing Securities Research A Best Practice Guide:**

**Writing Securities Research** Jeremy Bolland, 2010-12-01 The book highlights the major risks that securities analysts and other securities professionals face. The various laws, rules, and regulations that securities analysts are subject to are broadly split into three categories: research specific rules and regulations, market wide laws, and society wide laws and customs. The risks that arise out of these various levels of rules and regulations insofar as research analysts and other securities professionals are concerned include conflicts of interest, fair distribution front running of research, insider trading, spreading of rumours, not highlighting investment risks including corporate governance issues, as well as defamation and copyright issues. We see that if an analyst puts a company in play, a regulator would instantly assume that the analyst is trading on inside information especially if the information turns out to be true or is spreading a rumour especially if it turns out to be false. However, we also see that there is a third option that the analyst might just have come to his or her conclusion through some good research based on verifiable facts and reasonable assumptions. Definitions of research from around the world are examined. After all, research is generally defined by its content, not by the author's job description. As such, non-research securities professionals such as brokers and marketers of research, as well as investors, journalists, and even bloggers and tweeters, need to understand what constitutes research so that they don't fall into the regulators' purview. As regards the risks to investment views that analysts need to highlight to their investors, the book not only examines economic and financial risks but also examines corporate governance issues such as executive compensation, equal treatment of shareholders, related party transactions, and risk management. To demonstrate the risks that analysts, securities professionals, and investors face, the book draws on many cases and examples from around the world, including many from the global financial crisis of 2007-2009. From these cases, we see how penalties for those involved in the securities markets have become more serious over the years. They range from fines to imprisonment and even to execution in some markets. To give a light-hearted angle, many of these cases are accompanied by Alex cartoons.

*Agile Data-Oriented Research Tools to Support Smallholder Farm System Transformation* James Hammond,Mark Van Wijk,Aniruddha Ghosh,Tim Pagella,Jacob Van Etten,2023-05-09

Smallholder farming systems contribute a substantial quantity of the food consumed in many lower and middle income countries and contribute to the national and local economies Despite the importance of smallholder farming a transformation is needed in order to deliver food security and decent incomes for the farmers themselves and at the national level This transformation must also be sustainable in terms of environmental impacts and social equity in order to be successful in the long term The pressures of population growth climate change and land fragmentation compound the problem Addressing these overlapping issues is a big challenge One obstacle is the lack of good quality granular data linking these issues together Household surveys are the workhorse method for gathering such data but there are well known problems that prevent household survey data from building up a big picture and delivering insights beyond the geographical boundary of each individual study Such obstacles include the lack of access to datasets differences in survey design and respondent biases Agile data oriented research tools can help to overcome these challenges We use the term agile to imply methods that do not attempt exhaustive measurements which are designed to be easy to use and which entail some degree of flexibility in terms of adaptation to local conditions and integration with other tools or methods Often these methods also nudge the behavior of tool users towards best practices In recent years various research tools and approaches have been published which fit within our definition of agile data oriented research tools The domains these tools function in include monitoring and evaluation intervention targeting tailored information delivery citizen science credit scoring and user feedback collection all with the over arching aim to improve data quality and access for those studying the sustainable development of smallholder farming systems The goal of this Research Topic is to better define that niche the ecosystem of tools and current practices and to explore how such approaches can provide the underpinning knowledge required for the transformation of smallholder farming systems One example of an agile data oriented research tool is the Rural Household Multi Indicator Survey RHoMIS It is a modular digital system for building household surveys addressing the common topics in smallholder

development It was purposefully designed to give a broad overview of the farm system whilst keeping survey duration to a minimum to be user friendly in implementation and to be sufficiently flexible to function in a broad variety of locations and projects Since 2015 it has been used by 30 organizations in 32 countries to interview over 34 000 households The tool and database are open access and a community of practice is developing around the tool We particularly welcome contributions that engage with the RHoMIS tool and data However we also describe the tool in order to provide an example of what is meant by an agile data oriented research tool and welcome contributions focusing on other tools or methodologies We encourage the submission of manuscripts addressing the above topic and those which fit within one of the following three sub themes i Perspectives or review articles which explore the niche best practices or promising approaches in agile data oriented research tools for smallholder farm system transformation Also technology and code articles that describe new tools are welcomed ii Original research articles presenting analyses based on data derived from agile data oriented tools used at the project level Examples include impact evaluations adoption studies targeting studies or adaptive management and should reflect on the additional benefit leveraged by the agile method applied iii Original research articles that make use of the large amounts of data generated by such agile methods and or link between agile data and other data sources Examples include meta analyses of data from multiple studies layering data collected from different agile tools or linking agile data to remote sensing or large scale modeling outputs
