What Can Neuroscience Learn from Contemplative Practices? Zoran Josipovic, Bernard J. Baars, 2016-09-22 A recent wave of brain research has advanced our understanding of the neural mechanisms of conscious states contents and functions A host of questions remain to be explored as shown by lively debates between models of higher vs lower order aspects of consciousness as well as global vs local models Baars 2007 Block 2009 Dennett and Cohen 2011 Lau and Rosenthal 2011 Over some twenty five centuries the contemplative traditions have also developed explicit descriptions and taxonomies of the mind to interpret experiences that are often reported in contemplative practices Radhakrishnan Rinbochay reflexivity or self knowing associated with consciousness the sense of self and consciousness and aspects of consciousness that are said to continue during sleep These real or claimed aspects of consciousness have not been fully integrated into scientific models so far This Research Topic in Consciousness Research aims to provide a forum for theoretical proposals new empirical findings integrative literature reviews and methodological improvements inspired by meditation based models We include a broad array of topics including but not limited to replicable findings from a variety of systematic mental practices changes in brain functioning and organization that can be attributed to such practices their effects on adaptation and neural plasticity measurable effects on perception cognition affect and self referential processes We include contributions that address the question of causal attribution Many published studies are correlational in nature because of the inherent difficulty of conducting longitudinal experiments based on a major lifestyle decision such as the decision to commit to a mental practice over a period of years We also feature clinical and case studies integrative syntheses and significant opinion articles

Cerebral Palsy in Infancy Roberta B. Shepherd, 2013-09-20 Cerebral Palsy in Infancy is a thought provoking book which introduces a new way of thinking on the development and use of interventions Relevant to current practice it advocates early targeted activity that is focused on increasing muscle activation training basic actions and minimizing or preventing mal adaptive changes to muscle morphology and function The authors present recent scientific findings in brain science movement sciences developmental biomechanics motor control mechanisms motor learning exercise science and muscle biology This knowledge provides the rationale for active

intervention underpinning the need for an early referral to appropriate services The book features methods for promoting relatively intensive physical activity in young infants without placing a burden on parents which include assistive technologies such as robotics electronic bilateral limb trainers and baby treadmills Cerebral Palsy in Infancy begins by specifying the guidelines for training and exercise outlining the rationale for such intervention It goes on to cover the fundamentals of neuromotor plasticity and the development and negative effects of limited motor activity on brain organization and corticospinal tract development Neuromuscular adaptations to impairments and inactivity are discussed along with the General Movement assessment that can provide early diagnosis and prognosis facilitating very early referral from paediatric specialists to training programs The book ends with a section featuring various methods of training with the emphasis on preventing minimizing muscle contracture stimulating biomechanically critical muscle activity and joint movement An ideal clinical reference for those working to improve the lives of infants suffering from cerebral palsy
