Writing and Psychology Douglas Vipond, 1993-09-21 Although psychology is steeped in writing as a discipline, it has developed little explicit understanding of writing. This is the first book to examine writing and the teaching of writing in psychology from the standpoint of composition studies, the scholarly field that specializes in the study and teaching of writing. The book's purpose is to develop a different, richer, more explicit understanding of writing than psychology presently has. Three major aspects of writing are discussed: audience, genre, and style. After examining these, the author draws implications for the teaching of writing in psychology. The work does not aim to tell psychologists how to write better; rather, it suggests how they might think differently about writing.

The Psychology of Writing Ronald T. Kellogg, 1999-08-05 The human ability to render meaning through symbolic media such as art, dance, music, and speech defines in many ways the uniqueness of our species. One symbolic medium in particular, written expression, has aroused increasing interest among researchers across disciplines in areas as diverse as the humanities, education, and the social sciences because it offers a fascinating window into the processes underlying the creation and enunciation of symbolic representation. In *The Psychology of Writing*, cognitive psychologist Ronald T. Kellogg reviews and integrates the fast-growing multidisciplinary field of composition research, a field that seeks to understand how people formulate and express their thoughts with the symbols of written text. By examining the production of written text, the book fills a large gap in cognitive psychology, which until now has focused on speech production, comprehension, and reading while virtually ignoring how people write. Throughout, the author masterfully examines the many critical factors that come together during the writing process, including writer personality, work schedules, method of composing, and knowledge. In providing an

important new theoretical framework that enables readers from a wide range of backgrounds to navigate the extensive composition literature the author drives home the profound significance of meaning making as a defining feature of human cognition Kellogg not only draws from the work of leading composition scholars but quotes insights into the writing process proffered by some of the most gifted practitioners of the writing craft including E M Forster John Updike and Samuel Johnson Engaging and lively *The Psychology of Writing* is the perfect introduction to the subject for students researchers journalists and interested general readers *Undergraduate Writing in Psychology* R.
