X1 Box Cast:

Applied and Computational Measurable Dynamics Erik M. Bollt, Naratip Santitissadeekorn, 2013-12-03 Until recently measurable dynamics has been held as a highly theoretical mathematical topic with few generally known obvious links for practitioners in areas of applied mathematics. However, the advent of high speed computers rapidly developing algorithms and new numerical methods has allowed for a tremendous amount of progress and sophistication in efforts to represent the notion of a transfer operator discretely but to high resolution. This book connects many concepts in dynamical systems with mathematical tools from areas such as graph theory and ergodic theory. The authors introduce practical tools for applications related to measurable dynamical systems, coherent structures, and transport problems. The new and fast developing computational tools discussed throughout the book allow for detailed analysis of real world problems that are simply beyond the reach of traditional methods. *Principles and Labs for Deep Learning* Shih-Chia Huang, Trung-Hieu Le, 2021-07-06

Principles and Labs for Deep Learning provides the knowledge and techniques needed to help readers design and develop deep learning models. Deep Learning techniques are introduced through theory, comprehensively illustrated, explained through the TensorFlow source code examples, and analyzed through the visualization of results. The structured methods and labs provided by Dr. Huang and Dr. Le enable readers to become proficient in TensorFlow to build deep Convolutional Neural Networks (CNNs) through custom APIs, high-level Keras APIs, Keras Applications, and TensorFlow Hub. Each chapter has one corresponding Lab with step-by-step instruction to help the reader practice and accomplish a specific learning outcome. Deep Learning has been successfully applied in diverse fields such as computer vision, audio processing, robotics, natural language processing, bioinformatics, and chemistry. Because of the huge scope of knowledge in Deep Learning, a lot of time is required to understand and deploy useful working applications; hence, the importance of this new resource. Both theory lessons and experiments are included in each chapter to introduce the techniques and provide source code examples to practice using them. All Labs for this book are placed on GitHub to facilitate the download. The book is written based on the assumption that the reader knows basic Python for programming and basic Machine Learning. Introduces readers to the usefulness of neural networks and Deep Learning methods. Provides readers with in-depth understanding of the architecture and operation of Deep Convolutional Neural Networks. Demonstrates the visualization needed for designing neural networks. Provides readers with an in-depth understanding of regression problems, binary classification problems, multi-category classification problems, Variational Auto Encoder, Generative Adversarial Network, and Object detection.
