15 rocket plane flew at Mach 6.72 and at altitudes above 67 miles at the threshold of space. The men who piloted this amazing plane became the USAF's first astronauts. Powered by an XLR 99 engine capable of producing 70,000 pounds of thrust at peak altitude, the X-15 pushed the flight envelope for manned aircraft past the post office. Notably, both Apollo astronaut Neil Armstrong and Space Shuttle commander Joe Engle piloted the X-15. Originally published by North American for the USAF and later NASA, this Flight Operating Handbook represents a 1963 update of the original version first printed in 1961. Just recently declassified, it provides a revealing look into one of history's great planes. Also included in this edition is a rare X-15 rescue manual made for the plane's ground crew. Please note: due to the archival nature of some portions of the original documents, image and text quality may vary. Care has been taken to preserve the integrity of the text. **Airbus**

**Northrop YB-49 Flying Wing Pilot's Flight Manual** United States Air Force, 2010-03-01. Visionary designer Jack Northrop built a series of experimental flying wing aircraft both before and during WWII. The YB-35, a propeller-driven strategic bomber featuring the drag-reducing all-wing design, offered enormous payload capacity and terrific endurance. The YB-49, a turbojet-powered variant built on the YB-35 airframe, captured the imagination of the world when it first flew in 1947. It quickly set both an unofficial endurance record and a transcontinental speed record and appeared poised for rapid deployment. Tragically, in June of 1948, one of two flying prototypes was destroyed when the aircraft suffered a structural failure during a test flight. In hearings after the accident, evidence was presented that in certain circumstances the aircraft could become unstable and exceed the capabilities of a human pilot. Shortly thereafter, the YB-49 program was canceled. Jack Northrop's radical design was shelved for a generation only to re-emerge in the form of the B-2 Spirit Stealth bomber, an aircraft that relies upon computerized controls to ensure stability in flight. Originally printed by Northrop Aircraft in 1948, this YB-49 Flying Wing pilot's flight manual taught pilots everything they needed to know before entering the cockpit. Originally
