Science Experiments This Week:

The Well-trained Mind Susan Wise Bauer, Jessie Wise, 2004 This book will instruct you step by step on how to give your child an academically rigorous comprehensive education from preschool through high school. Two veteran home educators outline the classical pattern of education: the trivium, which organizes learning around the maturing capacity of the child's mind. The elementary school grammar stage, the middle school logic stage, and the high school rhetoric stage. Using the trivium as your model, you'll be able to instruct your child in all levels of reading, writing, history, geography, mathematics, science, foreign languages, rhetoric, logic, art, and music, regardless of your own aptitude in those subjects. Newly revised and updated, *The Well Trained Mind* includes detailed book lists with complete ordering information, up-to-date listings of resources, publications, and Internet links, and useful contacts.

Last Minute Science Fair Ideas - Due in a Week or More... Experiland, 2010-09-23
Have you ever wondered how a telescope brings objects closer or how cameras take pictures? How boats float or aeroplanes fly? All of these seemingly complicated things can be explained by basic science. With the help of this book, you will construct many weird, wonderful, and wacky experiments that you can have hours of fun with. Is the deadline for your science fair project quickly approaching? Not to worry, the *Last Minute Science Fair Ideas* series is written in an easy-to-follow format that will guide you to create an exciting science project for the upcoming fair. The science projects in each of the books of this 4-volume series are conveniently sorted according to the approximate time required to complete each experiment. The 50 projects contained in this science experiment e-book cover a wide range of scientific topics from Chemistry and Electricity to Life Sciences and Physics; there are even experiments on earth science, astronomy, and geology, all designed for science students from grade 1 to 8. With this book, you are sure to find a project that interests you. When you are interested in a certain science topic, you will have more fun and learn more, too. Amongst many others, you will make a simple astrolabe to measure the altitude of objects in the night sky; make dirty water pure and drinkable to understand how evaporation, condensation, works; make beautiful patterns on a wall to experiment with sound waves; and build a Franklin bells device for detecting high voltage lightning storms and learn about static electricity. Other fun experiments include growing your own crystals along a piece of string, making your own homemade perfume, measuring the extend of creeping soil on hillsides, making a water barometer to measure the air pressure, checking the wind speed with your own anemometer, building your own rain alarm, building your own foxhole radio, sending Morse code signals with your own telegraph, mummifying an orange, growing plants in your own hydroponic garden, testing the effects of acid rain on ocean life, studying the complete life cycle of a meal worm, and many, many more. When making these gadgets, you'll discover that science is a part of every object in our daily lives, and who knows, maybe someday you will become a famous inventor, too. Designed with safety in mind, most of the items you will need for the experiments, such as jars, aluminium foil, scissors, and sticky tape, you can find around your home. Others, such as magnets, lenses, or a compass, you will be able to buy quite cheaply at a hobby shop or hardware store.

Access Denied George Campbell Jr., Ronni Denes, Catherine Morrison, 2000-05-04 Since the Civil Rights Era of the 1960s minority groups have seen a tremendous amount of progress but African Americans, Latinos, and American Indians still remain severely underrepresented in science, engineering, and mathematics. And although government, industry, and private philanthropies have supported more than 200 pre-college and college-level initiatives to increase the access and retention of minority students, the outcomes of these programs have not been well documented. This book from the National Action Council for Minorities in Engineering (NACME) presents definitive essays by leading research scholars, academics, and industry representatives on the participation of minorities in science, mathematics, and engineering. Its extensive coverage includes essays on current demographics, entering the education system, influences on minority participation, barriers to success and preparation for academic careers. It is ideal for scholars, researchers, educators, and policymakers who study and strive to break the barriers of discrimination.
