Howlett, Alfonso Capozzoli, Lakhmi C. Jain, 2019-10-26 This volume contains the proceedings of the 11th KES International Conference on Sustainability and Energy in Buildings 2019 SEB19 held in Budapest 4th 5th July 2019 organised by KES International in partnership with Cardiff Metropolitan University Wales UK SEB 19 invited contributions on a range of topics related to sustainable buildings and explored innovative themes regarding sustainable energy systems The aim of the conference was to bring together researchers and government and industry professionals to discuss the future of energy in buildings neighbourhoods and cities from a theoretical practical implementation and simulation perspective The conference formed an exciting chance to present interact and learn about the latest research and practical developments on the subject The conference attracted submissions from around the world Submissions for the Full Paper Track were subjected to a blind peer review process Only the best of these were selected for presentation at the conference and publication in these proceedings It is intended that this volume provides a useful and informative snapshot of recent research developments in the important and vibrant area of Sustainability in Energy and Buildings *Introduction to Middleware* Letha Hughes Etzkorn, 2017-06-12 A stereotype of computer science textbooks is that they are dry boring and sometimes even intimidating As a result they turn students interests off from the subject matter instead of enticing them into it This textbook is the

opposite of such a stereotype. The author presents the subject matter in a refreshing story telling style and aims to bring the Internet generation of students closer to her stories. Yingcai Xiao, The University of Akron, Introduction to Middleware: Web Services, Object Components and Cloud Computing provides a comparison of different middleware technologies and the overarching middleware concepts they are based on. The various major paradigms of middleware are introduced and their pros and cons are discussed. This includes modern cloud interfaces including the utility of Service Oriented Architectures. The text discusses pros and cons of RESTful vs non RESTful web services and also compares these to older but still heavily used distributed object component middleware. The text guides readers to select an appropriate middleware technology to use for any given task and to learn new middleware technologies as they appear over time without being greatly overwhelmed by any new concept. The book begins with an introduction to different distributed computing paradigms and a review of the different kinds of architectures, architectural styles, patterns and properties that various researchers have used in the past to examine distributed applications and determine the quality of distributed applications. Then it includes appropriate background material in networking and the web security and encoding necessary to understand detailed discussion in this area. The major middleware paradigms are compared and a comparison methodology is developed. Readers will learn how to select a paradigm and technology for a particular task after reading this text. Detailed middleware technology review sections allow students or industry practitioners working to expand their knowledge to achieve practical skills based on real projects so as to become well functional in that technology in industry. Major technologies examined include RESTful web services, RESTful cloud interfaces such as OpenStack, AWS EC2 interface, CloudStack, AJAX, JAX RS, ASP .NET, MVC and ASP .NET Core, non RESTful SOAP and WSDL based web services, JAX WS, Windows Communication Foundation, distributed objects components, Enterprise Java Beans, .NET Remoting, CORBA. The book presents two projects that can be used to illustrate the practical use of middleware and provides implementations of these projects over different technologies. This versatile and class tested textbook is suitable depending on chapters selected for undergraduate or first year graduate courses on client server architectures, middleware and cloud computing, web services and web programming.

[Connectivity Frameworks for Smart Devices](#) Zaigham Mahmood, 2016-07-25. This timely volume provides a review of the state of the art frameworks and methodologies for connecting diverse objects and devices according to the vision for an Internet of Things (IoT). A specific focus is placed on the communication security and privacy aspects of device connectivity in distributed environments. Insights and case studies are provided by an authoritative selection of contributors of international repute into the latest research advances and practical approaches with respect to the connectivity of heterogeneous smart and sensory devices. Topics and features:

- Examines aspects of device connectivity within the IoT.
- Presents a resource based architecture for IoT and proposes a resource management framework for corporate device clouds.
- Reviews integration approaches for the IoT environment and discusses performance optimization of intelligent home networks.
- Introduces a novel solution for interoperable data
