Pretschner,D. Peled,T. Hutzelmann,2017-10-24

Cyber physical systems closely combine and coordinate subsystems consisting of both computational and physical elements Such systems have become indispensable in the fields of aerospace automotive and the automation industries as well as in consumer appliances Safety security and reliability are all essential elements of the trustworthiness of these modern cyber physical systems Protecting the data within such systems from external attack security and protecting the environment from any potential malfunction or misuse of these systems safety are subjects traditionally considered separately but a closer look reveals that techniques for the construction and analysis of the software based systems used in both security and safety are not necessarily fundamentally different This book presents papers from the 2016 Marktoberdorf summer school on software engineering held in Marktoberdorf Germany in August 2016 As its title Dependable Software Systems Engineering suggests the lectures at this summer school explored various aspects of the engineering of more dependable software systems and the 10 lectures included here cover subjects from programming languages and formal analysis tools to verification validation and assurance The book will be of interest to all those whose work involves the development and testing of more reliable and secure software systems      Watching TV Harry Castleman,Walter J. Can TTD Lead the Way with Neuromarketing? ,2023-04-21 Seminar paper from the year 2022 in the subject Communications Public Relations Advertising Marketing Social Media grade 1 0 Hult International Business School language English abstract The Trade Desk hereinafter TTD is a global technology firm with a focus on real time programmatic marketing automation solutions goods and services TTD identifies the main challenge on how TTD should work with significant TV platforms and providers to help drive this culture change among advertisers A potential for marketers has arisen as a result of the emergence of CTV More influential platforms including Netflix Disney and HBO Max have lately committed offering discounted subscriptions in return for a few minutes of ads between series and movies The promise of highly targeted data driven ad impressions for TV which is frequently the largest campaign component has replaced the conventional upfront approach where marketers commit billions in advance with no clear notion of who will see their ads To

delve into this problem and narrow it down to finally come up with a more detailed research question the peel the onion approach was used The funnel process within the framework of this research entails current data and its outlook of the ads market both for traditional as well as CTV ads a breakdown of both advertisement methods its bidding allocation processes differences as well as its ad and disadvantages are explored Furthermore the significance of data collection opportunity for CTV ads and problems that might arise with it are discussed addition ally to opportunities and risks that could emerge with this new shift to CTV ads before finally ending in the research question Can TTD revolutionize CTV advertising through neuromarketing and establish itself as the leading software platform for CTV platforms by displaying highly personalized ads to each unique user Even though the current CTV advertising already provides promising metrics to measure the success rate of the respective advertisements ads are only dis tributed to the according series and movies rather to the user him herself Thus if TTD would establish a solution to be able to show specific ads to specific users the value both quantitative ROI and qualitive visiting the website shopping the product will increase significantly
