Ans : I2C (Inter-Integrated Circuit) is a two-wire serial communication protocol developed by Philips Semiconductors for communicating between integrated circuits. Each device is identified by a unique address, and data is transferred in packets of 8 bits with **ACK** or **NACK** bits.

Q2 : What are the advantages of using I2C over other communication protocols?

Ans : Some advantages of using I2C over other communication protocols include its **simplicity, low power consumption, low cost, and ability to support multiple devices on the same bus.**

Q3 : What are the limitations of I2C?

Ans : Some limitations of I2C include its **slow speed compared to other communication protocols like SPI**, its **limited range due to its two-wire nature**, and the potential for signal integrity issues if the bus is not properly terminated.

Q4 : How many devices can be connected to an I2C bus?

Ans : The number of devices that can be connected to an I2C bus depends on the available address space. In standard mode, there are **128 possible 7-bit addresses**, while in fast mode, there are **2048 possible 10-bit addresses**.
