On the Origin of life Dr I Pearson,2025-09-15 This book proposes a bold new answer to one of science's oldest questions Instead of starting with random chemistry On the Origin of Life shows how living systems could have begun with deterministic field structures built from protons electrons and neutrinos through mechanisms described by Stein Theory These simple geometric rules of spin alignment and corridor formation created stable feedback loops memory and responsiveness long before DNA proteins or cells existed The book traces life's journey from invisible neutrino based dark life through rock bound Darwinian chemistry and droplet proto cells into the rise of membranes DNA and organisms It demonstrates how many of these early processes remain embedded in modern biology and how understanding them opens new possibilities in medicine synthetic biology and the search for life in the universe

### **Biology Explained** Dr I

Pearson,2025-09-12 Biology Explained provides a clear deterministic explanation of life health and disease built from Stein Theory first principles Inside you'll discover Life's fundamental engine how proton face lock corridors and oscillation pumps power biology at the femtometre scale Cellular health as geometry why corridor collapse leads to cancer ageing and neurodegeneration and how early intervention could prevent them Reset and repair mechanisms a blueprint for restoring healthy corridor networks before irreversible damage occurs Applied medicine ideas for next generation cancer prevention regenerative medicine and real time bio structural monitoring

### **Neural Implementations of Expertise** Merim Bilalić, Robert

Langner,Guillermo Campitelli,Luca Turella,Wolfgang Grodd,2015-12-18 When we think about expertise we usually consider people who master tasks at a level not reachable by most other people Although we rarely realise it however most humans are experts in many aspects of everyday life This expertise enables us to find our way through a complex environment that is our life For instance we can instantly recognise multiple objects and relations between them to form a meaningful unit such as an office Thus research on expertise is not only important to investigate the cognitive and neural processes within an elite

group but it is also a powerful tool to understand how everyone can acquire complex skills The goal of this Research Topic is to shed further light on the common and distinct neural mechanisms that implement various kinds of expertise We broadly define expertise as skill in any perceptual cognitive social or motor domain with the common core being optimised information processing due to knowledge acquired from repeated experiences Thus we are interested in the full range of mental processes modulated or modified by expertise from simple object or pattern recognition to complex decision making or problem solving in a particular domain These domains can range from everyday or occupational expertise to sports and rather artificial domains such as board games In all cases the aim should be to elucidate how the brain implements these sometimes incredible feats We are particularly interested in connecting cognitive theories about expertise and expertise related performance differences with models and data on the neural implementation of expertise We welcome original research contributions using the full range of behavioural neuroscience methods as well as theoretical methodological or historical reviews and opinion papers focusing on any of the above mentioned aspects

*Immunological Methods* Ivan Lefkovits, Benvenuto Pernis, 2014-05-12 Immunological Methods Volume IV provides information pertinent to the methods in immunological research This book focuses on cells clones and cell lines as well as on their components and secreted products Organized into 21 chapters this volume begins with an overview of hybridoma methodology as the most celebrated immunological method This text then discusses cell fusion hybridoma technology and everything related to monoclonal antibodies Other chapters consider another molecular biology method which describes the procedure required for establishing a partitioned cDNA library This book provides as well a comprehensive analysis of mRNA populations in which every messenger species appears as a distinct element and so provides accurate answers to questions concerning genetic complexity The final chapter provides an example of how transgenic mice can be used to study the development of T cell repertoires This book is a valuable resource for cell biologists scientists immunologists and research workers
