Adaptive optics is a field which is coming into its own with new discoveries occurring almost daily both in astronomy and in applications of AO in applied fields In an adaptive optics system the output from a wavefront sensor is used to calculate corrections that actively remove distortions from an image The applications of adaptive optics in vision science have received considerable impetus from the knowledge developed by astronomers about how to correct images using AO technology It is expected that developments in adaptive optics will radically change the face of astronomy in the 21st century These systems will largely overcome the main limitation of ground based telescopes namely the severe reduction in image quality caused by turbulence in the Earth s atmosphere Intended for use at near infrared wavelengths adaptive optics allow imaging and spectroscopy at the limit of resolution imposed by optical diffraction an advance in astronomer s ability to view the heavens unparalleled since the invention of the telescope AO is now also entering clinical medicine in the field of ophthalmology and other related fields This new book presents several hundred current abstracts in the field each fully indexed for ease of access and contains a CD ROM for further research
