The most powerful laser projection in energy from this series, the turbolaser's main advantage, which continues with a stream of ionized laser gas to produce an intense heat. The ionized gas can heat the beam, providing a range that is double or more that of conventional laser cannons. The distributed power of the heat-energy field can punch through an enemy's shields and force armor yielding.

The second section of the tower contained rows of capacitor banks, which stored energy that the laser

actuator converted into charged beams of intense light. This energy storage capability was crucial to enable the turbolasers to maintain rapid fire.

The third section housed the support crew and maintenance stations, and also the subcritical turbine generator required to power the tower.

The basement section of the tower contained the gunnery stations and fire tracking and targeting computers. Although gunnery were operated remotely, that helped them provide instant targeting for their guns. Only the targeting computers could keep track of multiple targets and direct the patterns to point out the missing enemy starfighters.
