Artificial Intelligence in Animal Behaviour, Veterinary Behaviour and Neurology Holger Andreas Volk,Jasmin Nicole Nessler,Anna Zamansky,Sebastian Meller,Annika Bremhorst,2025-08-18 The new leap innovation Artificial Intelligence AI will significantly accelerate the speed of science and translate into clinical practice faster than clinicians ever have been used to Machine and deep learning techniques are now readily available to analyze large and complex data sets providing veterinary scientists with a tool to not only better understand complex behaviour traits and

neurological conditions but also to delve into the nuances of animal behaviour itself AI can now write plausible sounding text recognize written or spoken human words recognize objects in images or analyze large amounts of data Different fields of applications are known so far such as improving and speeding up interpretation of radiologic findings interpretation of electroencephalography diagnosis of autism in children objectifying ataxia in dogs detecting pain in cats and assessing and characterizing animal behaviours across species At the time of writing more than 500 AI based algorithms have been approved by the FDA for human medicine most of which are used in radiology and neurology In veterinary neurology and animal behavioural science only a limited amount of research on AI has been done so far Most algorithms presented are merely fragments of usable programs and are not suitable for clinical application Therefore ready to use applications are rare yet essential for implementing AI into everyday routine diagnostic work ups scientific research and animal behavioural assessments The research topic will help to unite current efforts and provide a collection of articles to address some of the current scientific and behavioural gaps In the future a clinician might have a clinical decision support tool that generates accurate estimations of likely outcomes of neurological disease and animal behaviour combining anamnestic behavioural clinical pathology and imaging information We are interested in original research systematic reviews and opinion papers not only about the scope and potential of AI for Veterinary Behavior and Neurology but also about the intersection of AI with the study of animal behaviour ethical considerations and pitfalls that the development of AI generated tools could present Potential themes therefore include but are not limited to AI to recognize monitor diagnose or characterise behaviour neurological deficits or conditions including a detailed analysis of animal behaviour across a variety of contexts and species AI to assess behavioural states in both clinical and natural environments AI to interpret scientific clinical data sets such as clinical pathology omics imaging EEG data and behaviour metrics Ethical and legal considerations when applying or using AI tools in the study of animal behaviour and veterinary medicine Potential of AI to enhance clinical practice in veterinary behavioural medicine veterinary neurology and animal behaviour research Potential of AI enhanced diagnostic and behavioural assessment tools with animals

Media Industries in the Digital Age Amanda D. Lotz, Timothy

Havens, 2024-11-18 The digital communication technologies that emerged at the turn of the century have profoundly disrupted long practiced norms of nearly every media industry In particular internet distribution has fundamentally changed the foundation of the media industry to enable the emergence of new sectors while posing a challenge for others Media Industries in the Digital Age reframes our understanding of media businesses in the light of these substantial changes To develop an integrated understanding of media industries today the book foregrounds the different funding sources that are now common It begins by mapping the foundations and developments of media industry operation and exploring all forms of advertiser funded and consumer funded media to identify connections across sectors including digital and legacy media The final section grounds the book's conceptual work in examples of media making to explore how some old media have

successfully adapted to internet disruption and the differences and similarities of media making outside of corporations Looking to the future the book anticipates implications for the emerging metaverse media experiences and the key issues generative AI poses to the sector Ultimately the book argues that the contemporary differences in media industry operation vary by sector but meaningful patterns can be identified by considering how advertiser consumer or government funding sets different priorities Offering a new and original way of understanding the media industries today this book is enlightening reading for students and scholars of media studies and media industries as well as global industry professionals Forest and Stream ,1897
