

Literature Review Process

Preparation

- What is your topic?
- What resources do you have?
- How will you keep track of your research?

Retrieval

- Brainstorm search terms
- Use filters to narrow
- Keep a record of searches you've tried

Appraisal

- Skim the articles you're finding
- Do they look relevant?
- Do they meet your criteria?

Synthesis

- Read and take notes
- Notice any themes emerging across sources
- Pay attention to what other articles are cited

Write-up

- Consider audience for format, length, tone
- Can group articles by theme
- Include analysis/critique

Sharing

- How to reach your target/imagined audience?
- Are there others who might be interested?
- What are the best avenues to share?

Future

- Document your work along the way so your process can be replicated
- Make sure your work is safely stored so it can be accessed later

This process doesn't have to be linear!

You can return to each step as needed throughout your research.

American Monthly Review of Reviews Albert Shaw, 1928 Sequencing and Phylogenetic Analysis as a Tool in Molecular Epidemiology of Veterinary Infectious Diseases, volume II Iryna Goraichuk, Amro Hashish , Mohamed H. Maarouf, 2025-12-03 The development of sequencing technologies dramatically changed the course of epidemiological studies of infectious diseases Virus genomics have already been used to investigate infectious disease outbreaks for several decades

Since the introduction of Next generation Sequencing NGS the viral or bacterial whole genomes can be sequenced in a matter of days Now thanks to advances in high throughput sequencing and decreasing costs most virus genomics studies utilize data sets containing tens to thousands of complete genomes While well established sequencing platforms still provide robust insights the real time sequencing approaches and analysis opens up entirely new applications in the field of molecular epidemiology The advances in genome sequence technologies have improved the ability to track and understand the bacterial and viral transmission of animal diseases Phylogenetic analysis of these genomes can be used to clarify the key questions in infectious disease epidemiology from the initial detection and characterization of outbreak viruses to transmission chain tracking and outbreak mapping which can now be much more accurately addressed using recent advances in virus sequencing and phylogenetics The threat of emerging and re emerging infectious diseases continues to be a challenge to public and global health security as well as animal health and highlights that sequencing is not just a critical tool in bio surveillance it can also play a major role in pandemic or outbreak response The scope of the Research Topic is to explore the current status and future perspectives of sequencing technologies in the control and prevention of infectious diseases including the elucidation of diagnosis molecular evolution distribution and transmission of important veterinary infectious diseases The collection welcomes but is not limited to Original Research Methods and Reviews in the following areas Molecular surveillance of specific infections at the local national and international levels Rapid detection and characterization of emerging pathogens Whole and partial genome sequencing of viral and bacterial isolates Short and long read sequencing approaches for infectious diseases control and prevention Development of new bioinformatic tools for NGS data analysis Volume I Sequencing and Phylogenetic Analysis as a Tool in Molecular Epidemiology of Veterinary Infectious Diseases *Tractor and Gas Engine Review* ,1913 **New Avenues for the Development of Advanced**

Immunotherapies: Capitalizing on Studies of the B and T Cell Receptor Repertoire Massimiliano Mazza,Fabio Nicolini,Maria Del Mar Naranjo Gomez ,Mireia Pelegrin,2025-11-20 Immunotherapy has emerged as a transformative domain within oncology and a variety of other medical fields demonstrating its potential through the use of immune checkpoint inhibitors adoptive cell therapies and monoclonal antibodies These strategies have significantly improved cancer treatment outcomes and broadened therapeutic horizons Nonetheless the clinical application of numerous therapeutic and diagnostic targets remains limited reducing the translational impact of molecular biology advances NSG based technologies focusing on B and T cell receptor repertoires have enabled the development of next generation immunotherapies such as CAR therapies engineered antibodies and bispecific antibodies enhancing treatment options across infectious diseases autoimmune disorders and cancers This Research Topic aims to provide a comprehensive summary of current methodologies used in the creation and development of pertinent immunotherapies It seeks to present an up to date exploration of the rapidly evolving fields of antibody development and immune receptor repertoire analysis emphasizing their clinical relevance across various

disease states including autoimmune and infectious diseases and particularly cancer To expand the boundaries of molecular immunology and immunotherapy development this Research Topic encourages contributions that explore diverse aspects including but not limited to o Novel techniques for discovering and crafting antibodies and receptor specific molecules ScFv VHH o Innovative methods for identifying antigens associated with antibodies and TCRs o Creation of databases cataloging T and B cell receptor repertoires from individuals and patients exposed to specific conditions o Preclinical studies validating the efficacy of targeted immunotherapies and diagnostics such as CAR therapies ADCs BiTEs and companion diagnostics With the adoption of advanced tools like NGS in receptor complexity analysis and screening the future of immunotherapy looks promising potentially ushering in a new era of enhanced specificity and efficacy in treatment across multiple diseases Contributions ranging from original research articles to comprehensive reviews are welcomed to deepen understanding and push the boundaries of this exciting field Manuscripts consisting solely of bioinformatics or computational analysis of public genomic or transcriptomic databases which are not accompanied by robust and relevant validation clinical cohort or biological validation in vitro or in vivo are out of scope for this topic

Microbiome and Machine Learning, Volume II Erik Bongcam-Rudloff, Marcus Claesson, Aldert Zomer, Randi Jacobsen Bertelsen, Isabel Moreno Indias ,Domenica D'Elia, 2024-10-24 Due to the success of Microbiome and Machine Learning which collected

research results and perspectives of researchers working in the field of machine learning ML applied to the analysis of microbiome data we are launching the second volume to collate any new findings in the field to further our understanding and encourage the participation of experts worldwide in the discussion The success of ML algorithms in the field is substantially due to their capacity to process high dimensional data and deal with uncertainty and noise However to maximize the combinatory potential of these emerging fields microbiome and ML researchers have to deal with some aspects that are complex and inherently related to microbiome data Microbiome data are convoluted noisy and highly variable and non standard analytical methodologies are required to unlock their clinical and scientific potential Therefore although a wide range of statistical modelling and ML methods are available their application is only sometimes optimal when dealing with microbiome data

High-Energy Astrophysics Research Enabled By The Probe-Class Mission Concept HEX-P Gabriele Ponti,Murray Brightman,Esra Bulbul , Renee Ludlam,Daniel Stern,Javier A. García,2025-06-02 The Astro 2020 Decadal report Pathways to Discovery in Astronomy and Astrophysics for the 2020s identified the need for a new class of mission for the next decade that fills the gap between a Mid sized Explorer MIDEX and Flagship Large mission The report specifically recommends that a cadence of one probe mission per decade with a cost cap of 1.5 billion balances scientific scope with timeliness NASA has followed this recommendation and opened a call for Astrophysics Probe Explorer APEX proposals restricted to either a far infrared or an X ray mission due in Fall 2023 with a planned launch date in no later than 2032 In response to this call the High Energy X ray Probe HEX P concept has been developed as a partnership between NASA's Jet Propulsion Laboratory JPL the California Institute of Technology Caltech and the NASA Goddard Space Flight Center GSFC with international partnership from the Italian Space Agency ASI Italy the German Space Agency DLR and the Max Planck Institute for Extraterrestrial Physics MPE Germany HEX P is a mission concept that offers sensitive broad band coverage from soft to hard X rays 0.2-80 keV with an exceptional combination of spectral timing and angular capabilities It features two high energy telescopes HETs that focus hard X rays and one low energy telescope LET that focuses lower energy X rays building upon the heritage of previous successful missions such as XMM Newton and NuSTAR With this leap in observational capability HEX P will be capable of addressing fundamental questions about the extreme environments around black holes and neutron stars map the growth of supermassive black holes and quantify the effect they have on their environments HEX

P will resolve the hard X ray emission from dense regions of our Galaxy to understand the high energy source populations and investigate dark matter candidate particles through their decay channel signatures In this Frontiers Research Topic we present a collection of papers which delve into some of the most exciting scientific questions that can be addressed with a mission like HEX P The papers have been prepared by members of the HEX P collaboration which is organized into four main scientific pillars Black Hole Growth Accretion Power Stellar Evolution Time Domain and Multi Messenger Astronomy The individual papers cover a range of topics including The cosmic X ray background Seyfert galaxies Compton thick active galaxies and blazars Black hole binaries neutron stars magnetars ultraluminous X ray sources and tidal disruption events The physics of the X ray corona X ray populations in nearby galaxies Supernova remnants pulsar wind nebulae and nuclear astrophysics Galactic PeVatrons star clusters superbubbles microquasar jets and gamma ray binaries The Galactic Center Supermassive black spin measurements and dual active galaxies Pulsar Timing electromagnetic counterparts of gravitational wave sources and transient phenomena The main goal of this Research Topic is to present detailed modeling and simulations for a range of HEX P science cases in order to demonstrate the capabilities of HEX P in serving the astrophysics community in the next decade The members of the HEX P mission are welcome to present Original Research papers as well as any other kind of article types that fit their manuscript Please have a look at [here](#) to choose the appropriate article type to submit to this collection This Research Topic is organized by the researchers of the HEX P mission Authors and Guest Editors belong to the same consortium Furthermore Dr Daniel Stern and Dr Javier Garcia are the Principal Investigator and the Project Scientist of the mission respectively All manuscripts will be peer reviewed by researchers external to the collaboration

European Partnership on the Assessment of Risks from Chemicals (PARC): Focus on New Approach Methodologies (NAMs) in Risk Assessment Terje Svingen, Tamara Vanhaecke, Louise Ramhøj, 2024-08-21 The European Partnership on the Assessment of Risks from Chemicals PARC project was launched in 2022 The overarching aim of this partnership is to enhance our knowledge about chemical substances to better safeguard human health and the environment against harmful effects The project will run for seven years under Horizon Europe PARC is subdivided into several work packages WPs WP5 is focused on hazard assessment for human and environmental health and includes more than 80 partners across Europe WP5 aims to fill data gaps for specified chemical substances of concern e.g. bisphenol alternatives and to develop or improve new approach methodologies NAMs for chemical hazard assessment This is in order to progress towards a risk assessment paradigm relying less on animal toxicity data both with respect to human health and environmental safety As the PARC initiative will evolve over time with respect to both projects and activities presenting early initiatives will foster an increased awareness of ongoing activities and potential incorporation of new activities going forward
