Helming,2016-02-05 User Experience Design in the Era of Automated Driving Andreas Riemer, Myounghoon Jeon, Ignacio Alvarez, 2022-01-01 This book is dedicated to user experience design for automated driving to address humane aspects of automated driving e.g. workload, safety, trust, ethics and acceptance. Automated driving has experienced a major development boost in recent years. However, most of the research and implementation has been technology driven rather than human centered. The levels of automated driving have been poorly defined and inconsistently used. A variety of application scenarios and restrictions has been ambiguous. Also, it deals with human factors, design practices and methods as well as applications such as multimodal infotainment, virtual reality, augmented reality and interactions in and outside users. This book aims at 1) providing engineers, designers and practitioners with a broad overview of the state of the art, user experience research in automated driving to speed up the implementation of automated vehicles and 2) helping researchers and students benefit from various perspectives and approaches to generate new research ideas and conduct more integrated research.

Merriman, Katherine L. Plant, Kirsten M. A. Revell, Neville A. Stanton, 2024-04-30

Since the introduction of Automated Vehicles (AVs) on roads, there have been a number of high-profile collisions which have highlighted significant driver challenges. These include challenges associated with drivers' trust in the automation, their knowledge and awareness of the AV's capabilities and limitations, and their reduced situation awareness of the road environment and the vehicle. Solutions are needed to overcome these challenges so that the expected benefits of AVs can be realised. *Driver Training for Automated Vehicles: A Systems Approach* identifies the training requirements for drivers of AVs and takes a systematic approach to design, develop, implement and evaluate a comprehensive training package to address these requirements. This book explores how training can overcome the driver challenges associated with AVs by improving drivers' mental models, trust in automation, decisions and behaviour when activating a Level 4 AV. It presents a systematic approach to the training lifecycle by first presenting the current state of research into AVs, identifying the challenges and

training requirements for drivers of AVs and then developing and evaluating a training programme to achieve these requirements This fascinating title highlights the need for drivers to undergo training for AVs and takes us a step closer to this need It walks readers through a systematic four step process and provides practical guidance to develop and evaluate an effective training programme The reader will develop a thorough understanding of the current driver challenges with AVs and the methods and systems to mitigate them through current knowledge and research This book is an ideal read for practitioners designers and academics with a professional or research interest in AVs Its appeal extends to those in the fields of automotive design Systems Engineering Human Factors and education and training
