

A large, traditional wooden spinning wheel is the central focus of the image. It features a large, light-colored wooden flywheel with many spokes, and a smaller bobbin wheel positioned to its left. The entire machine is supported by a sturdy wooden frame with four legs. The background is a plain, light-colored wall, and the floor appears to be a dark, polished surface. The text "Types of spinning wheels" is overlaid in a large, elegant, cursive font across the middle of the image.

wound onto the spindle by moving it so as to form a right angle with the spindle This type of wheel while known in Europe by the 14th century was not in general use until later The construction of the Great Wheel made it very good at creating long drawn soft fuzzy wools but very difficult to create the strong smooth yarns needed to create warp for weaving Spinning wheels ultimately did not develop the capability to spin a variety of yarns until the beginning of the 19th century and the mechanization of spinning In general the spinning technology was known for a long time before being adopted by the majority of people thus making it hard to fix dates of the improvements In 1533 a citizen of Brunswick is said to have added a treadle by which the spinner could rotate her spindle with one foot and have both hands free to spin Leonardo da Vinci drew a picture of the flyer which twists the yarn before winding it onto the spindle During the 16th century a treadle wheel with flyer was in common use and gained such names as the Saxony wheel and the flax wheel It sped up production as one needn't stop spinning to wind up the yarn
