Spreadsheet For Cooling Load Calculation Excel:

Load Calculation Applications Manual Jeffrey D. Spitler, 2009 The Load Calculation Applications Manual builds upon three previous ASHRAE publications that focus on the calculation of cooling and heating loads for commercial buildings. Whether you are a new engineer who is learning how to do load calculations or a veteran who wishes to learn the radiant time series RTS method this book is a must have resource. Outlined in the manual are two methods for calculating cooling loads in nonresidential buildings: the heat balance HB method and the RTS method. Both methods were first fully presented for use in design load calculations in the predecessor to this volume Cooling and Heating Load Calculation Principles. But much has changed since the book was first published in 1998. The Load Calculation Applications Manual steps in where the last book left off to provide you with the latest information regarding load calculations. In the book's early chapters an overview of the heat transfer processes present in buildings and a brief discussion of how they are analyzed together in order to determine the cooling load are provided. Later chapters focus on the theory and application of the RTS method systems and psychrometrics heating load calculations and the HB method and its implementation. The accompanying CD contains Microsoft Excel spreadsheets that compute cooling loads using the RTS method. These spreadsheets calculate the solar irradiation, conduction, time factor series and radiant time factors utilized by the method. Plus you can adapt the spreadsheets to compute cooling loads for a wide range of buildings.

Heating, Ventilating, and Air Conditioning Faye C.

McQuiston, Jerald D. Parker, Jeffrey D. Spitler, Hessam Taherian, 2023-08-14 Heating Ventilating and Air Conditioning. The authoritative resource providing coverage of all aspects of HVAC fully updated to align with the latest HVAC technologies and methods. Now in its Seventh Edition, Heating Ventilating and Air Conditioning has been fully updated to align with the latest technologies and industry developments while maintaining the balance of theoretical information with practical applications that has prepared many generations of students for their careers. As they work through the book, students will become familiar with different types of heating and air conditioning systems and equipment, understand processes and concepts involving moist atmospheric air, learn how to provide comfort to occupants in controlled spaces and gain practice calculating probable heat loss, gain and energy requirements. A companion website includes additional multiple choice questions, tutorial videos showing problem solving for R value calculation and Excel spreadsheets that can be used for practice calculations. The Seventh Edition includes new coverage of ductless A/C systems, heat exchangers and hybrid heat pumps, geothermal heat pumps, energy efficient equipment and UV principles of air quality treatment of airborne viruses like COVID-19. Heating Ventilating and Air Conditioning includes detailed coverage of topics such as Common HVAC units and dimensions, fundamental physical concepts and system selection and arrangement. Types of all air systems, air and water systems, all water systems and decentralized cooling and heating. Moist air and the standard atmosphere, fundamental parameters, adiabatic saturation and wet bulb temperature and the psychrometric chart. Outdoor and indoor design.

conditions transmission heat losses infiltration heat losses from air ducts auxiliary heat sources and intermittently heated structures Heat gain cooling load and heat extraction rate and application of cooling load calculation procedures Selection of pumps and fans and duct HVAC sizing Heating Ventilating and Air Conditioning helps prepare students for the industry by connecting the content to ASHRAE standards and by introducing coverage of software tools commonly used in HVAC design The text is suitable for one or two semester HVAC courses taught at junior to graduate levels in various engineering departments
