Genome Mining and Synthetic Biology in Marine Natural Products Discovery Maria Costantini, 2021-09-03 In recent years marine genomics has become a rapidly growing field helped by the large amount of information that is becoming available to the international scientific community Taking into account the current excitement in the field of

marine biotechnology this Special Issue entitled Genome Mining and Synthetic Biology in Marine Natural Product Discovery aims to assess the impact of these molecular approaches on the discovery of bioactive compounds from marine organisms. The term genome mining is used to identify all bioinformatic investigations aimed at detecting the biosynthetic pathways of bioactive natural products and their possible functional and chemical interactions. Several studies are now reporting on marine organisms. Oceans cover nearly 70% of the Earth's surface and host a huge ecological chemical and biological diversity. The natural conditions of the sea favor in marine organisms the production of a large variety of novel molecules with great pharmaceutical potential. Marine organisms are unique in their structural and functional features compared to terrestrial ones. Innovation in this field is very rapid as revealed by the funding of several Seventh Framework Programme FP7 and Horizon 2020 projects under the topic Blue Growth with the urgent goal of discovering new drugs.

**Ecotoxicology of Marine Organisms** Bernardo Duarte, Maria Isabel Violante Caçador, 2019-08-14 This book presents a comprehensive review of the most recent studies on the impact of contaminants on the marine environment. Conventional and new information as well as the latest techniques are presented which can be applied to several types of marine organisms from bacteria and fungi to animals and algae. Specific topics discussed include the impact of different contaminants on different organisms as well as different approaches and their outcomes in terms of impact assessment. The integration of these techniques is also discussed in order to attain sentinel species and biomarkers to be applied for assessing ecological quality and impact assessment programs and studies.

*Marine Antioxidants* Se-Kwon Kim, Kyung-Hoon Shin, Jayachandran Venkatesan, 2022-12-04 *Marine Antioxidants: Preparations, Syntheses and Applications* provides the most updated and comprehensive knowledge on utilizing marine derived substances for cosmeceutical, pharmaceutical and nutraceutical developments. The book delivers the isolation procedures and biological activity of marine derived antioxidant substances as discussed by international experts on antioxidant material from actinobacteria, crustaceans, diatoms, fish, microalgae, microbes and mangrove associated marine organisms and seagrasses. In addition, the book details marine derived bioactive antioxidants substances in the form of proteins, peptides, polysaccharides and lipids. Finally, the book provides the latest information on the mechanistic pathways of antioxidant substances with various diseases and nutritional perspectives. This is an essential resource for marine biotechnologists and marine biologists who want to better understand isolation procedures and antioxidant applications. Researchers interested in pharmaceutical nutrients, polymer science and cosmeceuticals industries, scientists as well as students and academics will also benefit from this book. Explores underutilized marine products for commercial applications. Offers isolated information and biological applications of each identified marine antioxidant. Discusses the latest approaches to treatments of diseases such as diabetes, arthritis and cancer using marine resources.
