Wallnau,2000 Teaches methods of statistics and how to apply them appropriately This fifth edition contains revised problems and learning checks and is divided into sections on descriptive statistics foundations of inferential statistics inferential statistics for sample mean differences and non parametric statistics Each section is preceded by a brief synopsis of goals and direction of material to be covered Includes chapter summaries problem solving tips worked examples and problems      *Test Equating, Scaling, and Linking* Michael J. Kolen,Robert L. Brennan,2013-03-14 Test equating methods are used with many standardized tests in education and psychology to ensure that scores from multiple test forms can be used interchangeably In recent years researchers from the education psychology and statistics communities have contributed to the rapidly growing statistical and psychometric methodologies used in test equating This book provides an introduction to test equating which both discusses the most frequently used equating methodologies and covers many of the practical issues involved This second edition expands upon the coverage of the first edition by providing a new chapter on test scaling and a second on test linking Test scaling is the process of developing score scales that are used when scores on standardized tests are reported In test linking scores from two or more tests are related to one another Linking has received much recent attention due largely to investigations of linking similarly named tests from different test publishers or tests constructed for different purposes The expanded coverage in the second edition also includes methodology for using polytomous item response theory in equating The themes of the second edition include the purposes of equating scaling and linking and their practical context data collection designs statistical methodology designing reasonable and useful equating scaling and linking studies importance of test development and quality control processes to equating equating error and the underlying statistical assumptions for equating Given the perennial debates about academic standards and grade inflation it is my view that tools such as those described in this book should be adopted much more widely by the academic community than they are at present This book provides an excellent overview and I strongly recommend it Short Book Reviews of the ISI April2005 I highly recommend this book to everybody who has any interest in equating and linking be they a student practitioner or researcher Psychometrika 2006

*Explanatory Item Response Models* Paul de Boeck,Mark Wilson,2013-03-09 This edited volume gives a new and integrated introduction to item response models predominantly used in measurement applications in psychology education

and other social science areas from the viewpoint of the statistical theory of generalized linear and nonlinear mixed models. Moreover, this new framework allows the domain of item response models to be coordinated and broadened to emphasize their explanatory uses beyond their standard descriptive uses. The basic explanatory principle is that item responses can be modeled as a function of predictors of various kinds. The predictors can be characteristics of items, of persons, and of combinations of persons and items; they can be observed or latent, of either items or persons, and they can be continuous or latent, categorical. Thus, a broad range of models can be generated, including a wide range of extant item response models as well as some new ones. Within this range, models with explanatory predictors are given special attention, but we also discuss descriptive models. Note that the item responses that we are referring to are not just the traditional test data but are broadly conceived as categorical data from a repeated observations design. Hence, data from studies with repeated observations, experimental designs, or with longitudinal designs may also be modeled. The intended audience for this volume is rather broad.

It is designed to help with every stage of the report writing process, including what to put in each section and recommendations for formatting and style.
