Stable Adaptive Systems Narendra:

Stable Adaptive Systems Kumpati S. Narendra, Anuradha M. Annaswamy, 2012-07-12 This graduate level text focuses on the stability of adaptive systems and offers a thorough understanding of the global stability properties essential to designing adaptive systems. Its self-contained unified presentation of well-known results establishes the close connections between seemingly independent developments in the field. Prerequisites include a knowledge of linear algebra and differential equations as well as a familiarity with basic concepts in linear systems theory. The first chapter sets the tone for the entire book introducing basic concepts and tracing the evolution of the field from the 1960s through the 1980s. The first seven chapters are accessible to beginners and the final four chapters are geared toward more advanced research-oriented students. Problems ranging in complexity from relatively easy to quite difficult appear throughout the text. Topics include results in stability theory that emphasize incidents directly relevant to the study of adaptive systems, the stability properties of adaptive observers and controllers, the important concept of persistent excitation, the use of error models in systems analysis, areas of intense research activity, and five detailed case studies of systems in which adaptive control has proved successful.

Stable Adaptive Systems Kumpati S. Narendra, Anuradha M. New Perspectives and Applications of Modern Control Theory Julio B. Clempner, Wen Yu, 2017-09-30 This edited monograph contains research contributions on a wide range of topics such as stochastic control systems, adaptive control, sliding mode control, and parameter identification methods. The book also covers applications of robust and adaptive control to chemical and biotechnological systems. This collection of papers commemorates the 70th birthday of Dr. Alexander S. Poznyak.

CONTROL SYSTEMS, ROBOTICS AND AUTOMATION - Volume X Heinz D. Unbehauen, 2009-10-11 This Encyclopedia of Control Systems, Robotics and Automation is a component of the global Encyclopedia of Life Support Systems (EOLSS) which is an integrated compendium of twenty-one Encyclopedias. This 22-volume set contains 240 chapters, each of size 5000-30000 words, with perspectives, applications, and extensive illustrations. It is the only publication of its kind carrying state-of-the-art knowledge in the fields of Control Systems, Robotics and Automation, and is aimed by virtue of the several applications at the following five major target audiences: University and College Students, Educators, Professional Practitioners, Research Personnel, and Policy Analysts, Managers, and Decision Makers, and NGOs.

Adaptive Systems in Control and Signal Processing, 1986 Karl Johan Åström, Björn Wittenmark, 1987 This second IFAC workshop discusses the variety and applications of adaptive systems in control and signal processing. The various approaches to adaptive control systems are covered and their stability and adaptability analyzed. The volume also includes papers taken from two poster sessions to give a concise and comprehensive overview treatment of this increasingly

Hill,2018-10-03 Deterministic Learning Theory for Identification Recognition and Control presents a unified conceptual framework for knowledge acquisition representation and knowledge utilization in uncertain dynamic environments It provides systematic design approaches for identification recognition and control of linear uncertain systems Unlike many books currently available that focus on statistical principles this book stresses learning through closed loop neural control effective representation and recognition of temporal patterns in a deterministic way A Deterministic View of

Learning in Dynamic Environments The authors begin with an introduction to the concepts of deterministic learning theory followed by a discussion of the persistent excitation property of RBF networks They describe the elements of deterministic learning and address dynamical pattern recognition and pattern based control processes The results are applicable to areas such as detection and isolation of oscillation faults ECG EEG pattern recognition robot learning and control and security analysis and control of power systems A New Model of Information Processing This book elucidates a learning theory which is developed using concepts and tools from the discipline of systems and control Fundamental knowledge about system dynamics is obtained from dynamical processes and is then utilized to achieve rapid recognition of dynamical patterns and pattern based closed loop control via the so called internal and dynamical matching of system dynamics This actually represents a new model of information processing i e a model of dynamical parallel distributed processing DPDP

Adaptive Systems in Control and Signal Processing, 1998 Robert R. Bitmead, Michael A. Johnson, Michael J. Grimble, 2000

Adaptive Systems have been studied for a substantial period as the logical intersection between modelling and design in control and signal processing Because of this adaptive systems studies need to live in these two worlds while introducing concepts of their own These reflect the requirements to track significant system variations or to eliminate initial parameter uncertainty all the while maintaining satisfactory transient performance Historically Adaptive Systems and notably Adaptive Control have been the subject of takeover bids by neighbouring tribes from fields such as gain scheduling identification robust design or nonlinear systems The response to this has been to add impetus to the understanding of the connections between these disciplines and adaptation leading in turn to improvements of theory and practice We would appear to be currently in a period where there are increasing contacts being made with fields such as Learning Systems Computer Architectures and Identification Rather than hostile takeovers these have helped to expand the capability of Adaptive systems dramatically In this IFAC Workshop on Adaptive control and Signal Processing a wide range of papers expressing the large number of fronts on which adaptive systems are developing has been drawn together
