WebFOCUS drilldowns support the execution of parameter-driven procedures that return information to the client based on user selection within a report.

For Office reports, it's a matter of security:

- With the enhanced **WebFOCUS** Repository security features, user requests require credentials.

- When a report is opened these credentials are maintained in the browser and NOT passed to the Office application.

- Without these credentials, the drilldown request can not get back into **WebFOCUS** to execute.
