

SAP Webi - Quick Guide

SAP Webi - Overview

Web Intelligence is part of SAP BusinessObjects product suite and is used for analytical and ad hoc reporting to meet an organization's business requirements. Web Intelligence is a Business Intelligence reporting tool for business users to analyze data in Data Warehouse. It assists business managers in the decision-making process for building future strategies.

Using Web Intelligence, business users can create basic, medium, and complex reports from transactional data in database and by creating Universes using Information Design Tool/UDT. Various SAP and non-SAP data sources can be used to create reports in Web Intelligence. SAP Business Warehouse (BW) system doesn't require a Universe to connect to Web Intelligence tool.

Web Intelligence tool can work as a client tool of BusinessObjects platform and also as a standalone tool for reporting.

Versions and History

BusinessObjects was first started in 1990 with the tool name Skipper SQL 2.x, and in the year 1994 Business Objects v3.0 was launched.

In 2005, BO XI was released and later on various other versions introduced. Some of the versions are –

- BO XI R1
- BO XI R2
- BO XI R3
- BO XI R3.1
- BO XI R3.2

In 2007, SAP acquired this company for \$6.8 billion and the product has been renamed as SAP BusinessObjects.

Later in the year 2011, BO XI 4.0 was introduced. The latest version of the tool is SAP BO 4.2.

Intelligent Transportation Related Complex Systems and Sensors Kyandoghere Kyamakya, Jean Chamberlain Chedjou, Fadi Al-Machot, Ahmad Haj Mosa, Antoine Bagula, 2021-09-01 Building around innovative services related to different modes of transport and traffic management intelligent transport systems ITS are being widely adopted worldwide to improve the efficiency and safety of the transportation system. They enable users to be better informed and make safer, more coordinated and smarter decisions on the use of transport networks. Current ITSs are complex systems made up of several components sub systems characterized by time dependent interactions among themselves. Some examples of these transportation related complex systems include road traffic sensors, autonomous automated cars, smart cities, smart sensors, virtual sensors, traffic control systems, smart roads, logistics systems, smart mobility systems, and many others that are emerging from niche areas. The efficient operation of these complex systems requires i) efficient solutions to the issues of sensors, actuators used to capture and control the physical parameters of these systems as well as the quality of data collected from these systems, ii) tackling complexities using simulations and analytical modelling techniques, and iii) applying optimization techniques to improve the performance of these systems.

Advances in Network Clustering and Blockmodeling Patrick Doreian, Vladimir Batagelj, Anuska Ferligoj, 2020-02-03 Provides an overview of the developments and advances in the field of network clustering and blockmodeling over the last 10 years. This book offers an integrated treatment of network clustering and blockmodeling, covering all of the newest approaches and methods that have been developed over the last decade. Presented in a comprehensive manner, it offers the foundations for understanding network structures and processes and features a wide variety of new techniques addressing issues that occur during the partitioning of networks across multiple disciplines such as community detection, blockmodeling of valued networks, role assignment, and stochastic blockmodeling. Written by a team of international experts in the field, *Advances in Network Clustering and Blockmodeling* offers a plethora of diverse perspectives covering topics such as bibliometric analyses of the network clustering literature, clustering approaches to networks, label propagation for clustering, and treating missing network data before partitioning. It also examines the partitioning of signed networks, multimode networks, and linked networks. A chapter on structured networks and coarsegrained descriptions is presented along with another on scientific coauthorship networks. The book finishes with a section covering conclusions and directions for future work. In addition, the editors provide numerous tables, figures, case studies, examples, datasets, and more. Offers a clear and insightful look at the state of the art in network clustering and blockmodeling. Provides an excellent mix of mathematical rigor and practical application in a comprehensive manner. Presents a suite of new methods, procedures, algorithms for partitioning networks as well as new techniques for visualizing matrix arrays. Features numerous examples throughout, enabling readers to gain a better understanding of research methods and to conduct their own research effectively. Written by leading contributors in the field of spatial
