Qureshi MD, 2012-01-31 Nine out of every ten medical students residents and fellows attempt to write a manuscript during their training Yet after finishing the training only 1 or 2 would continue to write scientific manuscripts due to the effort involved in preparing a manuscript Most medical students residents fellows and even junior faculty consider writing a scientific manuscript harder than working grueling hours on the clinical service The manual of scientific manuscript writing was developed to guide for medical students residents fellows and junior faculty by providing a step by step pathway for successful preparation of a manuscript The manual is expected to reduce the usual 3 and 6 months at times frustrating effort to a 1 to 2 week streamlined process to complete a manuscript

Writing a Biomedical Research Paper Brian Budgell,2008-12-05 All of us in biomedicine understand the urgency of getting experimental results into print as quickly as possible Yet this critical step in the cascade from research conception to publication receives almost no attention in our formal training It is as if we have been put to sea without a compass Our collective failure to achieve widespread literacy in our own language Biomedical Language seriously impedes the important process of disseminating new biomedical knowledge and thereby improving the human condition It is also a significant personal concern for researchers and clinicians in the highly competitive publish or perish environment of contemporary academia Of course if we are clever or lucky enough to come up with that Nobel Prize winning discovery great science will carry the day and we are likely to get published even if our writing is fairly horrid But most of us who publish are bread and butter scientists We compete for space in journals which may only accept 10% or 20% of the submissions that they receive each year For us convincing engaging writing will make the difference between being published or rejected or at least it will make the difference between being published on first submission or having to go through a number of revisions or journals None of this is to propose that good writing can make a silk purse out of a sow's ear Scientific content is the sine qua non of biomedical writing

The Writing of medical papers Maud Headline Mellish-Wilson,1922 *The 21st Century Guide To Writing Articles In The Biomedical Sciences* Shiri Diskin,2018-03-09 We live in an unprecedented era of flourishing of scientific publishing However many professionals in the biomedical sciences find writing articles to be a daunting task The book is meant to serve as a practical writing guide that covers the writing process from the project s inception until online distribution of the published article The book covers the framework for constructing a scientific study into a coherent narrative that can later be easily translated into a written manuscript The content of each article section in accordance with the IMRAD format is covered and many details for the construction of additional submission materials are provided Characteristics of papers reporting on specific types of research are presented as well as article types other than the general full research article The book is full of resources for additional reading and learning There are many writing guides on the market Most of them are general cover a wide range of scientific writing and are mainly aimed at students This book is best suited for young professionals who are a few years out of school They no longer enjoy the benefit of close mentoring by a thesis adviser or equivalent but still lack the experience to lead writing projects on their own Through her experience of teaching young professionals and editing their work Dr Diskin has learned their unique set of needs and the book has been written in an attempt to address them Dr Diskin addresses the reader in the second person with an ever supportive tone Importantly the practicalities of writing articles in today s interconnected environment are discussed throughout the book Topics such as coordinating the writing in a multinational team use of different types of software in the writing process and resources available online to support the writer are addressed in detail Related Link s **Writing the Biomedical Research Paper** Stanley Marion Garn,1970 [Biomedical Research](#) W.F. Whimster,2013-04-17 It is a distinct pleasure to be invited to prepare a short Foreword to *Biomedical Research* How to plan publish and present it by William F Whimster Ninety years have elapsed since T Clifford Allbutt the Regius Professor of Physic at the University of Cambridge published his classic work of 1904 *Notes on the Composition of Scientific Papers* Small in size but deep in wisdom it remains a remarkably useful if slightly old fashioned book still well worth reading Since 1904 and particularly in the last 25 years there has been an avalanche of books on scientific style Medawar has aptly observed that most scientists do not know how to write insofar as style betrays I homme meme they write as if they hated writing and wanted nothing more than to have done with it Whimster s book has a broader objective than most of this genre Unlike Allbutt who was addressing in the main those who

were writing their theses to obtain the MD Whimster writes for the young medical scientists who are planning and writing up an account of their research either for publication in scientific journals or for presentation of the scientific material at meetings Whimster a scientist and an experienced long term science editor has written an up to date version of an earlier and very successful volume Research How to Plan Speak and Write About It edited by C Hawkins and M Sorgi
