are still just starting to get involved in them Also very few people have published their work on their custom models or significant variables since they are generally developing these models for personal use in an attempt to gain an edge in DFS contests and win money Thus there is little to no motivation to make their research or methods publicly available This research will attempt to predict the weekly point output of a quarterback based on a variety of attributes and metrics Finding the important variables and statistical models and learning how to address the volatility in week to week performances for a quarterback will allow us to expand this to other player positions in the future In addition to understanding the best algorithms to apply to weekly point prediction and the best variables to use to predict a quarterback s output this research also seeks to answer the question that is a currently being debated in courtrooms across the country should DFS be considered a legal game of skill or a game of luck and therefore online gambling      **Drafting to Win** Robert
