|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| <b>Operations and Algebraic Thinking</b><br>Use the four operations with whole numbers.                                                                                                                                                                                                                                                                                                  |                |
| Interpret a multiplication equation as comparison, e.g., interpret $3 \times 5 = 15$ as 3 times as many as 5 and 5 times as many as 3. Represent whole numbers of multiplication comparisons as multiplication equations.                                                                                                                                                                |                |
| Apply and extend area models to solve problems involving multiplication equations, e.g., for $3 \times 8 = 24$ and $4 \times 6 = 24$ , use the area model to represent the problem, identifying multiplication comparison from area models.                                                                                                                                              |                |
| Use unknowns and numbers placed with whole numbers and basic facts to solve problems involving the four operations, including problems in which one or more numbers are unknown. Represent these problems using equations with a letter standing for the unknown quantity. Review the basic addition of problems using mental computation and estimation strategies, including rounding. |                |
| <b>Number and Operations in Base Ten</b><br>Understand place value understanding for multi-digit numbers.                                                                                                                                                                                                                                                                                |                |
| Recognize that in a multi-digit whole number, a digit in one place represents ten times what it represents in the place to its right. For example, recognize that 700 in 700 is ten times the value of 70 in 70.                                                                                                                                                                         |                |
| <b>Number and Operations: Fractions</b><br>Develop understanding of fraction equivalence and ordering.                                                                                                                                                                                                                                                                                   |                |
| Explain why a fraction is equivalent to a fraction or multiple of a fraction, e.g., $\frac{1}{2} = \frac{2}{4}$ , and use this understanding to compare two fractions with different denominators. For fractions with different denominators, use the number line to compare the fractions.                                                                                              |                |
