System Design Modeling And Metamodeling Language Of Science:

System Design Modeling and Metamodeling John P. van Gigch, 1991-07-31 This book is a venture in the worlds of modeling and of metamodeling. At this point I will not reveal to readers what constitutes metamodeling. Suffice it to say that the pitfalls and shortcomings of modeling can be cured only if we resort to a higher level of inquiry called metainquiry and metadesign. We reach this level by the process of abstraction. The book contains five chapters from my previous work *Applied General Systems Theory* Harper and Row London and New York First Edition 1974 Second Edition 1978. More than ten years after its publication this material still appears relevant to the main thrust of system design. This book is dedicated to all those who are involved in changing the world for the better. In a way we all are involved in system design from the city manager who struggles with the problems of mass transportation or the consolidation of a city and its suburbs to the social worker who tries to provide benefits to the urban poor. It includes the engineer who designs the shuttle rockets. It involves the politician engaged in drafting a bill to recycle containers or one to prevent pesticide contamination of our food. The politician might even need system design to chart his or her own re-election campaign.

Artificial Intelligence in Performance-Driven Design Narjes Abbasabadi, Mehdi Ashayeri, 2024-04-17

A definitive interdisciplinary reference to using artificial intelligence technology and data-driven methodologies for sustainable design. *Artificial Intelligence in Performance-Driven Design: Theories, Methods, and Tools* explores the application of artificial intelligence (AI) specifically machine learning (ML) for performance modeling within the built environment. This work develops the theoretical foundations and methodological frameworks for utilizing AI/ML with an emphasis on multi-scale modeling encompassing energy flows, environmental quality, and human systems. The book examines relevant practices, case studies, and computational tools that harness AI's capabilities in modeling frameworks, enhancing the efficiency, accuracy, and integration of physics-based simulation, optimization, and automation processes.

Furthermore it highlights the integration of intelligent systems and digital twins throughout the lifecycle of the built environment to enhance our understanding and management of these complex environments This book also Incorporates emerging technologies into practical ideas to improve performance analysis and sustainable design Presents data driven methodologies and technologies that integrate into modeling and design platforms Shares valuable insights and tools for developing decarbonization pathways in urban buildings Includes contributions from expert researchers and educators across a range of related fields Artificial Intelligence in Performance Driven Design is ideal for architects engineers planners and researchers involved in sustainable design and the built environment It s also of interest to students of architecture building science and technology urban design and planning environmental engineering and computer science and engineering

A Metamodel for Heritage-based Urban Development Matthias Ripp,2022-09-15 This book proposes a Metamodel for heritage based urban development based on urban morphology governance theory and the metamodeling concept of John P Van Gigch Building on international policies such as the 2011 Recommendation for Historic Urban Landscapes and the results of the 2016 Urban Habitat III Conference cultural heritage is now regarded as a potential resource for sustainable urban development While more and more evidence of the potential benefits of cultural heritage for sustainable development has been published this book is the first to develop and design a Metamodel that can be universally applied in a wide variety of settings The Metamodel was developed using grounded theory and design research methodology and is based on three successful case models from European contexts The book includes three application scenarios that elaborate how the metamodel can be used to design evaluate and improve processes where cultural heritage is a starting point for sustainable urban development
