Compensation events, including their definition, notification, quotations, assessment and implementation, are covered within the Engineering and Construction Short Contract (ECSC) by Clauses 60.1(1) to 63.10.

When considering the principle of compensation events under the ECSC, it is appropriate first to consider how change is managed with most other standard forms of contract.

6.2 The 'traditional approach' to managing change

The 'traditional approach' to managing change in construction contracts is normally dealt with in three separate elements within the contract.

(i) Variation

ebruary

The changes in the form of additions, omissions or substitutions are priced by measuring the changed work, then pricing the change using rates consistent with the Contractor's original tender. The pricing document for that tender is normally in the form of a bill of quantities, schedule of rates or a contract sum analysis.

Where the changed work is similar to that referred to in the pricing document, executed under similar conditions, and does not significantly change the quantity of work set out in the tender, the original rates and prices apply. Where the changed work is similar to that referred to in the tender, but not executed under similar conditions, and/or there is a significant change in the quantity of work, the original rates and Prices form the basis of the pricing, i.e. they are adjusted to allow for the differences in conditions and/or quantities. There are normally provisions for the parties to agree fair rates and Prices, consistent with the tender prices, and where the work cannot be clearly defined and/or measured then daywork provisions apply.

The problem is that there are rarely specific time scales within the contracts for submitting the Prices and agreeing them, apart from the Final Account, which is normally submitted by the Contractor and agreed by the Contract Administrator (Engineer, Architect, etc.) months or even years after the works have been completed.
