

The Chemistry of Combustion and Extinction

What is combustion?

Combustion is known as the scientific term for burning. Essentially, combustion is a chemical reaction whereby oxygen combines with a substance (usually referred to as a fuel) to produce heat and light in the form of a flame. Combustion reactions occur at high temperatures. Combustion is an example of an exothermic reaction; an exothermic reaction is a type of reaction in which energy becomes released into the surroundings. The energy released is typically thermal energy, however, both light and sound energy can be released. Flames have a complex structure and a definable composition; flames are deemed to be multiform and have the ability of existing at rather low temperatures, along with extremely high temperatures. A flames emission light tends to be the result of the presence of excited particles and generally, of charged atoms, electrons and molecules. The products of combustion reactions are compounds of oxygen (O_2), known as oxides. The products of a complete combustion reaction involve carbon dioxide (CO_2) and water vapor (H_2O). If there is plenty of air, then complete combustion will take place. The typical equation for a complete combustion reaction is as follows:

An example of this is methane (a natural gas (CH_4)). Below is the equation of its complete combustion:

However, if there isn't enough oxygen or air for complete combustion to take place, incomplete combustion will instead take place. Carbon dioxide and water vapour are still produced, but, two other different products are produced, these are: carbon monoxide (CO) this is a colourless toxic gas and also particles of carbon, these can appear as smoke and soot which can cause breathing problems.

The Fire Triangle

The fire triangle is one of the simplest method of understanding the elements of fire. Although its called a fire triangle, occasionally it is called a fire tetrahedron the reason for this will be explained below. This is because in reality for things **MUST BE** present at the **SAME TIME** in order for a fire. The three main elements needed for a fire is: Air, Fuel and heat; these are frequently referred to as the "fire triangle". The occasional fourth is a chemical chain reaction, this is what creates the "fire tetrahedron." An important thing to remember is; if one of just any of these elements get removed, a fire no longer has the ability to burn and will be extinguished.

Principles of Combustion

1. There must be Fuel to burn.
2. There must be Air to oxygen to be supplied.
3. There must be Heat to start and continue the process of combustion.

Unit 36 Forensic Fire Investigation Edexcel Introduction

Free PDF Books and Manuals for Download: Unlocking Knowledge at Your Fingertips In todays fast-paced digital age, obtaining valuable knowledge has become easier than ever. Thanks to the internet, a vast array of books and manuals are now available for free download in PDF format. Whether you are a student, professional, or simply an avid reader, this treasure trove of downloadable resources offers a wealth of information, conveniently accessible anytime, anywhere. The advent of online libraries and platforms dedicated to sharing knowledge has revolutionized the way we consume information. No longer confined to physical libraries or bookstores, readers can now access an extensive collection of digital books and manuals with just a few clicks. These resources, available in PDF, Microsoft Word, and PowerPoint formats, cater to a wide range of interests, including literature, technology, science, history, and much more. One notable platform where you can explore and download free Unit 36 Forensic Fire Investigation Edexcel PDF books and manuals is the internets largest free library. Hosted online, this catalog compiles a vast assortment of documents, making it a veritable goldmine of knowledge. With its easy-to-use website interface and customizable PDF generator, this platform offers a user-friendly experience, allowing individuals to effortlessly navigate and access the information they seek.
