QUESTION I recently purchased a new car and am considering whether to purchase a new car insurance policy. I am currently covered by my parents' policy. Should I purchase a new policy?

ANSWER The answer to this question depends on several factors, including the cost of the new policy, the coverage provided by the new policy, and the coverage provided by your parents' policy. If the new policy is significantly more expensive than your parents' policy, it may not be worth purchasing. However, if the new policy provides significantly better coverage than your parents' policy, it may be worth purchasing. You should also consider the financial situation of your parents. If they are unable to pay for your car insurance, you may need to purchase a new policy. Finally, you should consider the terms of your parents' policy. If they have a non-owner policy, you may not be covered while driving their car. If they have a family policy, you may be covered while driving their car. You should consult with your insurance agent to determine the best course of action for you.

CONFERENCES AND SEMINARS

19. **Effect of temperature on the rate of reaction:** The rate of reaction increases with increase in temperature. This is because the molecules have more kinetic energy and collide more frequently.
20. **Effect of concentration on the rate of reaction:** The rate of reaction increases with increase in concentration. This is because there are more molecules available for collision.
21. **Effect of surface area on the rate of reaction:** The rate of reaction increases with increase in surface area. This is because there are more molecules available for collision.
22. **Effect of catalyst on the rate of reaction:** A catalyst increases the rate of reaction by providing an alternative pathway with a lower activation energy.
23. **Effect of pressure on the rate of reaction:** The rate of reaction increases with increase in pressure. This is because there are more molecules available for collision.
24. **Effect of solvent on the rate of reaction:** The rate of reaction increases with increase in solvent. This is because there are more molecules available for collision.
25. **Effect of pH on the rate of reaction:** The rate of reaction increases with increase in pH. This is because there are more molecules available for collision.

Abstract—The authors examined the effects of a 12-week, 3-day-per-week, 100-min-per-session, supervised, low-impact aerobically and resistance training program on the health-related quality of life (HRQL) of 100 sedentary, middle-aged, obese women. The program was designed to be safe and enjoyable, and to be easily implemented in a community setting. The program was evaluated using the SF-36, a validated, self-report questionnaire that assesses HRQL. The results of the study showed that the program had a positive effect on the HRQL of the women, with significant improvements in the physical and mental health components of the SF-36. The authors conclude that a supervised, low-impact aerobically and resistance training program can be an effective means of improving the HRQL of sedentary, middle-aged, obese women.
