Web Data Mining Bing Liu, 2011-07-02 Web mining aims to discover useful information and knowledge from Web hyperlinks, page contents, and usage data. Although Web mining uses many conventional data mining techniques, it is not purely an application of traditional data mining due to the semi-structured and unstructured nature of the Web data. The field has also developed many of its own algorithms and techniques. Liu has written a comprehensive text on Web mining which consists of two parts. Background Uncertainty can be considered as the lack of adequate information to make a decision It is important to quantify uncertainties in mathematical models used for design and optimization of nondeterministic engineering systems In general certainty can be broadly classified into three types Bae et al 2004 Ha Rok 2004 Klir and Wierman 1998 Oberkampff and Helton 2002 Sentz 2002 The first one is aleatory uncertainty also referred to as stochastic uncertainty or inherent certainty it results from the fact that a system can behave in random ways For example the failure of an engine can be modeled as an aleatory uncertainty because the failure can occur at a random time One cannot predict exactly when the engine will fail even if a large quantity of failure data is gathered available The second one is epistemic uncertainty also known as subjective uncertainty or reducible certainty it is the uncertainty of the outcome of some random event due to lack of knowledge or information in any phase or activity of the modeling process By gaining information about the system or environmental factors one can reduce the epistemic uncertainty For example a lack of experimental data to characterize new materials and processes leads to epistemic uncertainty *Information Retrieval and Management: Concepts, Methodologies, Tools, and Applications* Management Association, Information Resources, 2018-01-05 With the increased use of technology in modern society high volumes of multimedia information exists It is important for businesses organizations and individuals to understand how to optimize this data and new methods are emerging for more efficient information management and retrieval *Information Retrieval and Management Concepts Methodologies Tools and Applications* is an innovative reference source for the latest academic material in the field of information and communication technologies and explores how complex information systems interact with and affect one another Highlighting a range of topics such as knowledge discovery semantic web and information resources management this multi volume book is ideally designed for researchers developers managers strategic planners and advanced level students *Social Media Data Mining* Vidhur Gupta, 2025-01-03 Social Media Data Mining Insights and Strategies delves into the techniques and challenges of mining social media platforms offering practical examples and exercises This comprehensive book comprising 10 chapters begins with an introduction to social media its platforms and the upcoming challenges in this field The first part covers data mining concepts graph and network evaluation algorithms and tools as well as communication strategies for boosting engagement on social media The second part explores mining data from platforms like Facebook Twitter LinkedIn and emails providing in depth analysis and case studies to illustrate real world applications We aim to enhance your understanding of social media data mining offering valuable insights for tackling big data challenges The book combines theoretical knowledge with practical exercises ensuring a successful learning journey **A Practical Guide to Sentiment Analysis** Erik Cambria, Dipankar Das, Sivaji Bandyopadhyay, Antonio Feraco, 2017-04-07 Sentiment analysis research has been started long back and recently it is one of

the demanding research topics Research activities on Sentiment Analysis in natural language texts and other media are gaining ground with full swing But till date no concise set of factors has been yet defined that really affects how writers sentiment i e broadly human sentiment is expressed perceived recognized processed and interpreted in natural languages The existing reported solutions or the available systems are still far from perfect or fail to meet the satisfaction level of the end users The reasons may be that there are dozens of conceptual rules that govern sentiment and even there are possibly unlimited clues that can convey these concepts from realization to practical implementation Therefore the main aim of this book is to provide a feasible research platform to our ambitious researchers towards developing the practical solutions that will be indeed beneficial for our society business and future researches as well

Lifelong Machine Learning Zhiyuan Chen,Bing Liu,2018-08-14 Lifelong Machine Learning Second Edition is an introduction to an advanced machine learning paradigm that continuously learns by accumulating past knowledge that it then uses in future learning and problem solving In contrast the current dominant machine learning paradigm learns in isolation given a training dataset it runs a machine learning algorithm on the dataset to produce a model that is then used in its intended application It makes no attempt to retain the learned knowledge and use it in subsequent learning Unlike this isolated system humans learn effectively with only a few examples precisely because our learning is very knowledge driven the knowledge learned in the past helps us learn new things with little data or effort Lifelong learning aims to emulate this capability because without it an AI system cannot be considered truly intelligent Research in lifelong learning has developed significantly in the relatively short time since the first edition of this book was published The purpose of this second edition is to expand the definition of lifelong learning update the content of several chapters and add a new chapter about continual learning in deep neural networks which has been actively researched over the past two or three years A few chapters have also been reorganized to make each of them more coherent for the reader Moreover the authors want to propose a unified framework for the research area Currently there are several research topics in machine learning that are closely related to lifelong learning most notably multi task learning transfer learning and meta learning because they also employ the idea of knowledge sharing and transfer This book brings all these topics under one roof and discusses their similarities and differences Its goal is to introduce this emerging machine learning paradigm and present a comprehensive survey and review of the important research results and latest ideas in the area This book is thus suitable for students researchers and practitioners who are interested in machine learning data mining natural language processing or pattern recognition Lecturers can readily use the book for courses in any of these related fields
