organized into five parts encompassing 37 chapters The first part deals first with the practical performance of various
systems for small scale wastewater treatment and the application of dimensioned aerated grit chambers as a highly loaded
activated sludge process This part also considers the incidence of *Sphaerotilus* *natans* in laboratory scale activated sludge
systems and the direct solid liquid separation using hollow fiber membrane in an activated sludge aeration tank The
succeeding parts discuss the theoretical and operational benefits of anaerobic and industrial wastewater treatment These
topics are followed by presentation of activated sludge models with particular emphasis on nitrification and precipitation
modeling as well as dynamic modeling of trace contaminant removal in a municipal sewage treatment plant The last part
explores the characteristics of biological phosphorus and phosphate removal process This book will prove useful to chemical
and environmental engineers and researchers in the related fields *Climate Change and Light in Aquatic Ecosystems:*
