Singularity Rising Singularity Rising:

Singularity Rising James D. Miller, 2012-10-16 In Ray Kurzweil's New York Times bestseller *The Singularity is Near* the futurist and entrepreneur describes the Singularity a likely future utterly different than anything we can imagine The Singularity is triggered by the tremendous growth of human and computing intelligence that is an almost inevitable outcome of Moore's Law Since the book's publication the coming of the Singularity is now eagerly anticipated by many of the leading thinkers in Silicon Valley from PayPal mastermind Peter Thiel to Google co founder Larry Page The formation of the Singularity University and the huge popularity of the Singularity website kurzweilai.com speak to the importance of this intellectual movement But what about the average person How will the Singularity affect our daily lives our jobs our families and our wealth *Singularity Rising Surviving and Thriving in a Smarter Richer and More Dangerous World* focuses on the implications of a future society faced with an abundance of human and artificial intelligence James D Miller an economics professor and popular speaker on the Singularity reveals how natural selection has been increasing human intelligence over the past few thousand years and speculates on how intelligence enhancements will shape civilization over the next forty years Miller considers several possible scenarios in this coming singularity A merger of man and machine making society fantastically wealthy and nearly immortal Competition with billions of cheap AIs drive human wages to almost nothing while making investors rich Businesses rethink investment decisions to take into account an expected future period of intense creative destruction Inequality drops worldwide as technologies mitigate the cognitive cost of living in impoverished environments Drugs designed to fight Alzheimer's disease and keep soldiers alert on battlefields have the fortunate side effect of increasing all of their users IQs which in turn adds a percentage points to worldwide economic growth *Singularity Rising* offers predictions about the economic implications for a future of widely expanding intelligence and practical career and investment advice on flourishing on the way to the Singularity

Shadows of Being Marko Uršič, 2019-01-15 This book is a study of the phenomena of shadows meant in a broader sense as symbolic forms The shadow is a less real surface replica of some more real form From the Platonic point of view empirical objects are shadows of ideas while from the modern natural point of view shadows are seen and conceived primarily as weaker replicas of bodies which give evidence of their material reality In the first three essays here several topics from the Ancient Egypt and Greece to modern arts and sciences are considered while in the fourth essay the contemporary virtual reality cyber technology and the internet as our parallel shadow world are discussed from the philosophical point of view The main and innovative point of this book is the connection between the meaning of shadows in philosophy and art on the one hand and their role in modern science and technology on the other The book will appeal to a wide span of readers from academic circles students and artists to the general reader interested in the humanities especially in philosophy and art

Superintelligence Nick Bostrom, 2014-07-03 The human brain has some capabilities that the brains of other animals lack It is to these distinctive capabilities that our species owes its

dominant position Other animals have stronger muscles or sharper claws but we have cleverer brains If machine brains one day come to surpass human brains in general intelligence then this new superintelligence could become very powerful As the fate of the gorillas now depends more on us humans than on the gorillas themselves so the fate of our species then would come to depend on the actions of the machine superintelligence But we have one advantage we get to make the first move Will it be possible to construct a seed AI or otherwise to engineer initial conditions so as to make an intelligence explosion survivable How could one achieve a controlled detonation To get closer to an answer to this question we must make our way through a fascinating landscape of topics and considerations Read the book and learn about oracles genies singletons about boxing methods tripwires and mind crime about humanity's cosmic endowment and differential technological development indirect normativity instrumental convergence whole brain emulation and technology couplings Malthusian economics and dystopian evolution artificial intelligence and biological cognitive enhancement and collective intelligence This profoundly ambitious and original book picks its way carefully through a vast tract of forbiddingly difficult intellectual terrain Yet the writing is so lucid that it somehow makes it all seem easy After an utterly engrossing journey that takes us to the frontiers of thinking about the human condition and the future of intelligent life we find in Nick Bostrom's work nothing less than a reconceptualization of the essential task of our time

Critical Zone 3 Douglas Kerr, Q.S. Tong, Shouren Wang, 2009-02-01 Despite globalizing forces whether economic political or cultural there remain conspicuous differences that divide scholarly communities How should we understand and respond to those discursive gaps among different traditions and systems of knowledge production Critical Zone is a book series in cultural and literary studies that is concerned with current critical debates and intellectual preoccupations in the humanities The series aims to improve understanding across cultures traditions discourses and disciplines and to produce international critical knowledge Critical Zone is an expression of timely collaboration among scholars from Hong Kong mainland China the United States and Europe and conceived as an intellectual bridge between China and the rest of the world The second volume of Critical Zone as does its predecessor consists of two parts The first part includes original essays that deal with the concept and practice of empire as a collective response to the question of how imperial formations and operations in the past and at present should be examined in a larger context of international politics and how historical imperialism may be considered in relation to the conditions of our time Part II includes two sets of translations of essays first published in Chinese about two recent debates in China one on the canonicity of Lu Xun and the other on the problem of how to reform Peking University in the context of globalization These two groups of translations are led by review essays that contextualize the debates
