### Study Guide for Weiten's Psychology: Themes and Variations, Briefer Edition

Description :

*Written by Richard Stalling and Ronald Wasden (both of Bradley University), who have more than 30 years of experience as a team in writing study guides for introductory psychology texts, the Study Guide helps students master the information in the text. It includes a review of key ideas for each chapter made up of an engaging mixture of matching exercises, fill-in-the-blank items, free-response questions, and programmed learning--organized around learning objectives written by Wayne Weiten. The Study Guide is closely coordinated with the Test Bank, as the same learning objectives guided the construction of questions in the Test Bank. The Study Guide also includes a review of key terms, a review of key people, and a self-test for each chapter.*

**Psychological Assessment in South Africa** Sumaya Laher, Kate Cockcroft, 2013-01-01 This book provides an overview of the research related to psychological assessment across South Africa. The thirty six chapters provide a combination of psychometric theory and practical assessment applications in order to combine the currently disparate research that has been conducted locally in this field. Existing South African texts on psychological assessment are predominantly academic textbooks that explain psychometric theory and provide brief descriptions of a few testing instruments. *Psychological Assessment in South Africa* provides in depth coverage of a range of areas within the broad field of psychological assessment including research conducted with various psychological instruments. The chapters critically interrogate the current Eurocentric and Western cultural hegemonic practices that dominate the field of psychological assessment. The book therefore has the potential to function both as an academic text for graduate students as well as a specialist resource for professionals including psychologists, psychometrists, remedial teachers and human resource practitioners.

**Research Methods for Social Psychology** Dana Dunn, 2009 *Research Methods for Social Psychology* teaches students to think like an experimental social psychologist. Striking a balance between theoretical sophistication and hands on activities and exercises, this engaging text offers a friendly approach to methodology and a successful means of motivating students to design and execute their own social psychological research. Active learning activities on social psychology in each chapter as well as thought exercises at the end of each chapter. Guidance on developing social psychology research topics, advice on ethics, reviews of research projects, instructions on how to design independent and dependent variables and assistance with performing a post experimental interview with participants. A stand alone chapter on basic data analysis in addition to directions for putting statistical results into words. Guidance on writing APA style summaries of social psychology experiments as well as giving oral and poster presentations includes a sample annotated APA style lab report. Instructor test bank with questions and answers for each chapter available at [www.wiley.com/go/dunn](http://www.wiley.com/go/dunn).

**Statistics for the Behavioral Sciences** James Jaccard, Michael A. Becker, 2002 Now your students can become intelligent consumers of scientific research without being overwhelmed by the statistics. Jaccard and Becker's text teaches students the basic skills for analyzing data and helps them become intelligent consumers of scientific information. Praised for its real life applications, the text tells students when to use a particular statistic, why they should use it, and how the statistic should be computed and interpreted. Because many students given a set of data cannot determine where to begin in answering relevant research questions, the authors explicate the issues involved in selecting a statistical test. Each statistical technique is introduced by giving instances where the test is most typically applied, followed by an interesting research example. Each example is taken from psychology literature.
