## **The Engineering Of Chemical Reactions:**

**Fundamentals of Chemical Reaction Engineering** Mark E. Davis, Robert J. Davis, 2003 Chemistry in the hands of Engineers This mantra initiated and developed largely in the research programs of academic chemical engineers over the last few decades has now made its way into the core undergraduate curriculum in the form of a new Chemical Reaction Engineering textbook by Cal Tech's Mark E. Davis and UVA's Robert J. Davis. Michael T. Klein, Rutgers University. This book is an introduction to the quantitative treatment of chemical reaction engineering. It is appropriate for a one semester undergraduate or first year graduate course. The text provides a balanced approach: first it covers both homogeneous and heterogeneous reacting systems; second it covers both chemical reaction engineering and chemical reactor engineering. Here's what reviewers have to say: The Davis book really brings out the strong coupling between chemical reactions and reactor design concepts in a pedagogical fashion. Michael S. Wong, Rice University. Great use of chemical reactions as teaching examples. Michael S. Wong, Rice University. The examples, illustrations, and vignettes given in the text are very well done and are of either fundamental or practical interest. David F. Cox, Virginia Tech. A primary motivation to use this text is the arrangement of the introductory material on kinetics. The initial description of reactions and kinetics in Davis appears prior to the introduction of reactor material balances. David F. Cox, Virginia Tech. Concise development and discussion of material. Michael S. Wong, Rice University.

**The Engineering of Chemical Reactions** Lanny D. Schmidt, 2005 The Engineering of Chemical Reactions 2e focuses on the analysis of chemical reactors while simultaneously providing a description of industrial chemical processes and the strategies by which they operate. This concise and up to date text is ideal for upper level undergraduate courses in chemical reactor engineering and kinetics. In addition to the analysis of simple chemical reactors it considers more complex situations such as multistage reactors and reactor separation systems. Energy management and the role of mass transfer in chemical reactors are also integrated into the text. Numerical methods are used throughout to consider more complex problems. Worked examples are given throughout the text and over 300 homework problems are included. Both the examples and problems cover real world chemistry and kinetics. The Engineering of Chemical Reactions 2e covers the fundamentals of describing and designing chemical processes considering reactor type, product selectivity and yield, heat management and mass transfer and it also focuses explicitly on developing ideas necessary to design a chemical reactor for any application including chemical production, materials processing and environmental modeling. The text is part of the Topics in Chemical Engineering series and is suitable for upper level undergraduate core courses in Chemical Reactor Engineering, Chemical Reactor Design, Kinetics and/or Chemical Reaction Engineering. Text is short and focuses explicitly on the development of the ideas necessary to design a chemical reactor for any application. Numerical methods are used throughout the text to consider more complex problems. Worked examples are given throughout the text and over 300 homework problems are included. Corrections to previous edition are incorporated. New

features include 2 new chapters chapter 12 Biological Reactions and chapter 13 Environmental Reactions New problems added at the end of most chapters New sections added in chapters 4 and 9 New figures in chapter 12 All equations are numbered throughout the book Increased focus on Biological and Environmental applications of chemical engineering Teaches students how to understand design and manage chemical reactions to obtain a desired result or product Ancillary material Solutions Manual 019516153X
