Domain-Specific Program Generation Christian Lengauer, Don Batory, Charles Consel, Martin Odersky, 2004-11-18 Program generation holds the promise of helping to bridge the gap between application level problem solutions and efficient implementations at the level of today's source programs as written in C or Java. Thus program generation can substantially contribute to reducing production cost and time to market in future software production while improving the quality and stability of the product. This book is about domain specific program generation; it is the outcome of a Dagstuhl seminar on the topic held in March 2003. After an introductory preface by the volume editors, the 18 carefully reviewed, revised full papers presented are organized into topical sections on surveys of domain specific programming technologies, domain specific programming languages, tool support for program generation, domain specific techniques for program optimization.

Practical Aspects of Declarative Languages Bharat Jayaraman, 2004-05-19 The International Symposium on Practical Aspects of Declarative Languages (PADL) is a forum for researchers and practitioners to present original work emphasizing novel applications and implementation techniques for all forms of declarative concepts, especially those emerging from functional logic and constraint languages. Declarative languages have been studied since the inception of computer science and continue to be a vibrant subject of investigation today due to their applicability in current application domains such as bioinformatics, network configuration, the Semantic Web, telecommunications software, etc. The 6th PADL Symposium was held in Dallas, Texas, on June 18-19, 2004, and was co-located with the Compulog Americas Summer School on Computational Logic. From the submitted papers, the program committee selected 15 for presentation at the symposium based upon three written reviews for each paper, which were provided by the members of the program committee and additional referees. Two invited talks were presented at the conference. The first was given by Paul Hudak, Yale University, on "An Algebraic Theory of Polymorphic Temporal Media." The second invited talk was given by Andrew Fall, Dowland Technologies, and Simon Fraser University, on "Supporting Decisions in Complex Uncertain Domains with Declarative Languages." Following the precedent set by the previous PADL symposium, the program committee this year again selected one paper to receive the Most Practical paper award.

Implementation and Application of Functional Languages Marco T. Morazán, Sven-Bodo Scholz, 2010-10-27 This book constitutes the thoroughly refereed post-proceedings of the 21st International Workshop on Implementation and Applications of Functional Languages (IFL 2000) held in South Orange, NJ, USA, in September 2009. The 13 revised full papers presented were carefully reviewed and were selected from numerous submissions. The IFL symposia bring together researchers and practitioners that are actively engaged in the implementation and the use of functional and function-based programming languages. Every year IFL provides a venue for the presentation and discussion of new ideas and concepts of

work in progress and of publication ripe results *Practical Aspects of Declarative Languages* Claudio Russo, Neng-Fa Zhou, 2012-02-02 This book constitutes the refereed proceedings of the 14th International Symposium on Practical Aspects of Declarative Languages PADL 2012 held in Philadelphia PA USA in January 2012 co located with POPL 2012 the 39th Symposium on Principles of Programming Languages The 38 revised technical papers presented together with 3 application papers were carefully reviewed and selected from 52 submissions The volume features original work emphasizing new ideas and approaches pertaining to applications and implementation techniques of declarative languages and addresses topics such as innovative applications of declarative languages declarative domain specific languages and applications practical applications of theoretical results new language developments and their impact on applications evaluation of implementation techniques on practical applications novel implementation techniques relevant to applications novel uses of declarative languages in the classroom and practical experiences **Discrete Mathematics Using a Computer** Cordelia Hall, John O'Donnell, 2013-04-17 Several areas of mathematics find application throughout computer science and all students of computer science need a practical working understanding of them These core subjects are centred on logic sets recursion induction relations and functions The material is often called discrete mathematics to distinguish it from the traditional topics of continuous mathematics such as integration and differential equations The central theme of this book is the connection between computing and discrete mathematics This connection is useful in both directions Mathematics is used in many branches of computer science in applications including program specification datastructures design and analysis of algorithms database systems hardware design reasoning about the correctness of implementations and much more Computers can help to make the mathematics easier to learn and use by making mathematical terms executable making abstract concepts more concrete and through the use of software tools such as proof checkers These connections are emphasised throughout the book Software tools see Appendix A enable the computer to serve as a calculator but instead of just doing arithmetic and trigonometric functions it will be used to calculate with sets relations functions predicates and inferences There are also special software tools for example a proof checker for logical proofs using natural deduction

The Haskell Road to Logic, Maths and Programming Kees Doets, Jan Eijck, 2004 Long ago when Alexander the Great asked the mathematician Menaechmus for a crash course in geometry he got the famous reply There is no royal road to mathematics Where there was no shortcut for Alexander there is no shortcut for us Still the fact that we have access to computers and mature programming languages means that there are avenues for us that were denied to the kings and emperors of yore The purpose of this book is to teach logic and mathematical reasoning in practice and to connect logical reasoning with computer programming in Haskell Haskell emerged in the 1990s as a standard for lazy functional programming a programming style where arguments are evaluated only when the value is actually needed Haskell is a marvelous demonstration tool for logic and maths because its functional character allows implementations to remain very

close to the concepts that get implemented while the laziness permits smooth handling of infinite data structures This book does not assume the reader to have previous experience with either programming or construction of formal proofs but acquaintance with mathematical notation at the level of secondary school mathematics is presumed Everything one needs to know about mathematical reasoning or programming is explained as we go along After proper digestion of the material in this book the reader will be able to write interesting programs reason about their correctness and document them in a clear fashion The reader will also have learned how to set up mathematical proofs in a structured way and how to read and digest mathematical proofs written by others This is the updated expanded and corrected second edition of a much acclaimed textbook Praise for the first edition Doets and van Eijck s *The Haskell Road to Logic Maths and Programming* is an astonishingly extensive and accessible textbook on logic maths and Haskell Ralf Laemmel Professor of Computer Science University of Koblenz Landau *Real-World Functional Programming* Tomas Petricek,Jon Skeet,2010-01-25 Real World Functional Programming is a unique tutorial that explores the functional programming model through the F and C languages
